

**Figure 3.1**

Sketch of wing-body showing forces, moments and distances.

**Figure 3.2**

The Indian Light Combat Aircraft (LCA)—a tailless wing-body configuration. (<http://www.defenceforumindia.com>; [http://3.bp.blogspot.com/\\_2istSpJf6tk/TOTT-xyHRLI/AAAAAAAAApE/way1ML29vsA/s1600/lca-tejas-9.jpg](http://3.bp.blogspot.com/_2istSpJf6tk/TOTT-xyHRLI/AAAAAAAAApE/way1ML29vsA/s1600/lca-tejas-9.jpg))

**Figure 3.3**

(a) An airfoil with reflex camber at the trailing edge and (b) a wing sweep and twist arrangement.

**Figure 3.4**

Graphs of  $C_m$  plotted against  $C_L^{wb}$  for two cases: (a)  $CG$  behind  $AC^{wb}$  and (b)  $CG$  ahead of  $AC^{wb}$ .

**Figure 3.5**

Schematic representation of the wing-body plus tail trim and stability.

**Figure 3.6**  
Wing-body and horizontal tail configuration.

**Figure 3.7**

Upwash and downwash due to flowfield around wing. (With permission from Gustavo Corujo, <http://history.nasa.gov>; <http://history.nasa.gov/SP-367/t54.htm>)

**Figure 3.8**

Trailing edge vortices emanating from tips of the wing of an airplane seen in the clouds. ([http://flyingindian.files.wordpress.com/2010/09/wingtip\\_vortices\\_lg.jpg](http://flyingindian.files.wordpress.com/2010/09/wingtip_vortices_lg.jpg))

**Figure 3.9**

Example of a T-tail configuration. (www.airliners.net) (<http://origin-www.airliners.net/aviation-photos/small/4/1/1/1972114.jpg>)

**Figure 3.10**

Plot of  $C_m$  versus  $\alpha$  in Example 3.5.

**Figure 3.11**

Sketch for Example 3.6 ( $h_{CG} \sim 0.36$  and  $h_{NP} \sim 0.526$ ).

**Figure 3.12**

Sketch of forces and moment on an airplane displayed at the neutral point.

**Figure 3.13**

Sketch of various locations and distances in case of a wing-body-plus tail.

**Figure 3.14**

Graph of  $C_m$  versus  $\alpha$  showing the effect of shift in CG position, and the practical rearmost CG position corresponding to trim at landing angle of attack, here taken to be nominally  $15^\circ$ . ([http://www.aerospace-web.org/aircraft/jetliner/b747/b747\\_21.jpg](http://www.aerospace-web.org/aircraft/jetliner/b747/b747_21.jpg))

**Figure 3.15**

Sketch of airplane and rearmost allowable *CG* position during rotation at take-off ground run.

**Figure 3.16**

Example of a ‘tail-sitting’ airplane due to improper loads on the ground. ([http://www.aerospaceweb.org/aircraft/jetliner/b747/b747\\_21.jpg](http://www.aerospaceweb.org/aircraft/jetliner/b747/b747_21.jpg))

**Figure 3.17**

Variation of  $C_L$  and  $C_m$  for the F-18/HARV from  $-14^\circ$  to  $+90^\circ$  angle of attack (✕-Stall).

**Figure 3.18**

$C_m$  versus  $\alpha$  curve of a general aviation airplane.

**Figure 3.19**

$C_m$ - $C_L$  curve for an airplane for different tail setting angles.

**Figure 3.20**

$C_m$ - $\alpha$  curve for an airplane with contributions from individual components.
