

Routledge

Built Environment & Geography Catalogue

July - December 2026
New and Forthcoming Titles

Welcome

Welcome to the July to December 2026 Built Environment & Geography Catalogue.

We welcome your feedback on our publishing programme, so please do not hesitate to get in touch – whether you want to read, write, review, adapt or buy, we want to hear from you, so please visit our website below or please contact your local sales representative for more information.

www.routledge.com

*Prices are correct at time of going to press and may be subject to change without notice.
Some titles within this catalogue may not be available in your region.*

eBooks

We have over 50,000 eBooks available across the Humanities, Social Sciences, Behavioural Sciences, Built Environment, STM and Law, from leading Imprints, including Routledge, Focal Press and Psychology Press. These eBooks are available for both individual and institutional purchase.

INDIVIDUALS

Our eBooks are available from Amazon, Apple iBookstore, Google eBooks, Ebooks.com, Kobo, Barnes & Noble, Waterstones, Mobipocket, VitalSource, and CourseSmart.

LIBRARIES AND INSTITUTIONS

Subscribe to or purchase a wide range of eBook packages or pick and mix your own from our complete collection (a minimum number of titles applies). FREE TRIALS are available. For more information, please visit www.tandfebooks.com or contact your local sales team.

eUpdates

Register your email at www.tandf.co.uk/eupdates to receive information on books, journals and other news within your area of interest.

Animals in Modern and Postmodern Architecture

Edited by **Kostas Tsiambaos**

Series: *Routledge Research in Architecture*

The book focuses on specific case studies from modern and postmodern architecture where animals stand out as agents that contribute to a broader political, cultural, and environmental critique. The various entangled, convoluted animal references and representations are not only seen as products of the architects' sublimation but also as critical reflections of the architects' active civic engagement and their role in the intellectual environment of their times.

Biological Design Beyond Earth

Mycelium-Regolith Habitats for Space Exploration

Monika Brandić Lipińska

Series: *Routledge Research in Architecture*

This book explores how fungal mycelium can support the construction of habitats for future human missions to Mars. Addressing the challenge of transporting building materials from Earth, presented research proposes a bio-fabrication strategy based on two principles: combining mycelium with Martian regolith to maximise local resources, and employing self-assembly to reduce energy and operational demands. Through biological experiments and architectural prototyping, the research develops low-biomass mycelium-regolith composites and investigates how these materials can be organised through architecture and biological processes to form structural habitation systems.

Architectural Autonomy and the Urban Condition

Miguel Lopez Melendez

Series: *Routledge Research in Architecture*

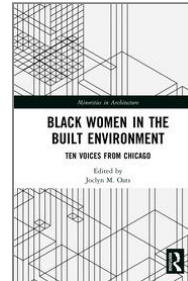

Architectural Autonomy and the Urban Condition revisits a controversial theme in architectural theory and history. This book reframes "autonomy" as a cultural issue rather than a purely disciplinary debate centered on architectural form. It offers the first urban formulation of "autonomy" by tracing philosophical, artistic, and political histories of the term while challenging narcissistic tendencies of architectural autonomy.

Black Women in the Built Environment

Ten Voices from Chicago

Edited by **Joclyn Oats**

Series: *Minorities in Architecture*

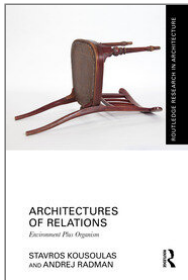

This book showcases the women of the Black Diaspora and quantifies their impact in reshaping the built environment in the 21st century. The collection includes experiences from black female architects, urban planners, interior architects, interior designers to demonstrate how they have, and still are, repaving the landscape for future generations. The book focuses specifically on ten diasporic women connected to Chicago, which has long been a laboratory for architectural innovation and experimentation.

Architectures of Relations

Environment Plus Organism

Stavros Kousoulas, Andrej Radman

Series: *Routledge Research in Architecture*

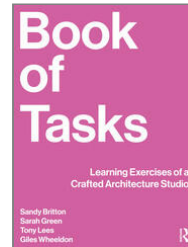

This book examines how environments and organisms dynamically produce one another. As such, it takes its title very seriously (and very literally): to speak of environment plus organism is the only viable way where neither term gets to be reduced to the other. It is rather their coming together, what thinkers like Gilbert Simondon call transindividuation, and it's unfolding that stand as the most exigent ambition of this book. In simple terms, this book claims that the minimum unit of analysis in any architectural account is always the environment, the organism and their (technological) plusing, examined as one.

Book of Tasks

Learning Exercises of a Crafted Architecture Studio

Sandy Britton, Sarah Green, Tony Lees, Giles Wheeldon

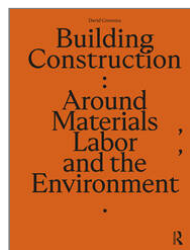

This Book of Tasks helps students and teachers navigate the process with curiosity and optimism through a flexible and instructive approach. Created by a team of architects with over a decade of teaching at the University of Liverpool, it provides an illustrated collection of instructive exercises for students and teachers of architecture, to guide and stimulate study and skill building across the design cycles of a professional undergraduate architecture studio.

Building Construction

Around Materials, Labor, and the Environment

David Costanza

This book advocates for a fundamental shift in how we design and build architecture, placing construction knowledge at the core of the design process. It explores how a deeper understanding of materials, labor, and the environment can yield architecture better attuned to its environmental, social, and cultural impacts. This book offers valuable insights into key concepts such as embodied versus operational energy, lifecycle, durability, longevity, constructability, precision, and tolerance. For architects and students alike, it offers a framework for rethinking the relationship between design and making by addressing the urgent demands of our time.

Built Environment Education for Children and Youth

Establishing the Field

Marta Brković Dodig, Angela Million Technical University Berlin, Germany, **Rosie Parnell** University of Sheffield, UK

Built Environment Education for Children and Youth is an essential guide to a dynamic yet fragmented field, bringing together educators, architects, spatial designers and planners, as well as cultural practitioners working in museums, schools, universities, architecture centres, professional bodies, networks and private practice, to explore how young people can meaningfully engage with their built environments.

Constructing Arizona

Embracing an Architecture of Place in the Sonoran Desert

Chad Schwartz Southern Illinois University–Carbondale, USA

This book is the first to comprehensively present the architecture of the Sonoran Desert region of Arizona, balancing a breadth of projects with a depth of analysis. Building on over fifty interviews with noted members of the architecture community in Arizona and the critical first-hand analysis of their built work, this book reveals the inherent principles, vocabulary, and influences of the regional architecture while also tying its contemporary makeup to a lineage of constructing in the Sonoran Desert. Given the current state of our planet, these lessons will be of critical importance to communities across the globe that soon may have to adapt to living in similar conditions.

Contemporary Latin American Architecture

Other Traditions

Edited by **Inés Martín-Robles**

Not a typical overview of Latin American Architecture, the book uncovers a series of lineages, often hidden or overlooked by international critics. In each chapter, prominent contemporary architects across Puerto Rico, Paraguay, Chile, Uruguay, Mexico, Peru, Ecuador, Colombia, Costa Rica, and Argentina, position their work within both historical and contemporary local and international traditions. This will be a crucial read for all researchers and students of Latin American architecture, history, and cultural heritage, as well as all those interested in exploring non-western, Global South, and non-canonical architectural traditions.

Design Ethics in Practice

A Procedural Method for Architects and Built Environment Professionals

Jeffrey Bulger

Design today speaks fluently of care—empathy, inclusion, community—but rarely of justification. Design Ethics addresses this gap by offering a reproducible, institution-ready method of ethical reasoning that can be taught, audited, and applied across professional design practice. Aligning ethics with the logic of the scientific method—hypothesis, evidence, review—Design Ethics reframes ethics as professional infrastructure, accountable to institutions and affected communities. Integrated appendices extend the method into procedures, governance, and pedagogy, ensuring ethical reasoning remains durable beyond individual judgment. Ethics becomes method.

Designbuild Pedagogies for Social Change

Past, Present and Potentials

Edited by **Emilie Taylor Welty**

This volume explores the transformative social change at the heart of designbuild education. From Black Mountain College to Rural Studio, designbuild was once viewed as a subversive critique of architectural education separate from the mainstream. In Designbuild Pedagogies, leaders and innovators in designbuild pedagogy from around the world expound on the methods they use to approach their work and the potentials they envisage for this expanding mode of teaching. These provocative chapters make for an accessible and inspiring window into designbuild's future and will be of interest to faculty and students of architecture and related design disciplines.

Designer's Pocket Book for Basic Research

Ann Devlin

Series: Routledge Pocket Books

Designers of the built environment too often complete projects and swiftly shift their attention to the next undertaking, without formally assessing the strengths and shortcomings of their just-completed design. This book will equip you with the tools to examine and more easily comprehend social science research literature. This will be a helpful resource for professionals in architecture, interior design, environmental design, landscape architecture and urban planning, particularly those in small firms with limited research budgets, as well as for students.

Designing Community Spaces

A toolkit for architects and communities

Mandip Sahota, Stefanie Stead

As more groups take ownership of the buildings, spaces and services that matter to them, architects are being asked to work in new ways. This hands-on guide introduces a community design lens to help both architects and community-led organisations collaborate effectively on projects with long-term public benefit. If you are part of a community-led organisation, this toolkit will also help you get the most out of working with an architect. This must-have book sets out a flexible framework to build shared language, navigate complexity and co-create from the very start.

Designing Mycelium

Exploring the Design Potential of Fungi

Edited by **Assia Crawford, Jonathan Dessi-Olive**

A silent, sprawling web, mycelium permeates the soil beneath our feet, anchoring the world with stubborn resilience. It is now entering design, architecture, and our built environments with the promise of a new regenerative and grown aesthetic. This book looks at ways of revitalizing damaged ecologies across scales and offers new ways of making for a world beyond extraction. The practices featured in this book are those of care, exemplifying ways to reconnect with our humanity through metabolism and decomposition while serving needs beyond our own.

Designing Sustainable Residences for Human Wellbeing

Lisa Tucker

This book is a how-to manual for designing sustainable residences for human wellness. While the commercial market has embraced these principles, the residential market lags behind. Residential designers work much more intimately with clients and are attuned to specific and individual needs. Including information on residential programming, space planning, materials, building systems, energy and water efficiency, this will be a helpful and complete guidebook for all residential designers and students of residential interior design and architecture.

2ND EDITION

Developing Your Design Process

Six Key Concepts for Studio

Albert Smith Ryerson University, Toronto, Ontario, Canada, **Kendra Schank Smith** Ryerson University, Toronto, Ontario, Canada

Developing Your Design Process is your primary source for learning how and why you design. It will help you understand how architects think and learn why you should educate yourself about design culture. The book is illustrated throughout with international examples of work by professionals and students in architecture and related design professions. Now in its second edition, the book has been thoroughly updated to reflect recent technical advances, improve readability for beginning students, and incorporate a broader, more diverse range of global examples and imagery.

3RD EDITION

Diagramming the Big Idea

Methods for Architectural Composition

Jeffrey Balmer University of North Carolina at Charlotte, **Michael Swisher** University of North Carolina at Charlotte

Becoming an architect is a daunting task. Beyond the acquisition of new skills and procedures, beginning designers face an entirely unfamiliar mode of knowledge: design thinking. In *Diagramming the Big Idea*, Jeffrey Balmer and Michael T. Swisher introduce the fundamentals of design thinking by illustrating how architects make and use diagrams to clarify their understanding of both specific architectural projects and universal principles of form and order. The goal of this book is to make explicit to students what they are learning, why they are learning it and how to internalize such lessons toward their lifelong development as designers.

Ecomuseums and Living Heritage in China

Reclaiming Memory and Identity

Meng Li , Gehan Selim

Series: Architecture and Urbanism in the Global South

Ecomuseums, founded on the radical principle of community-led heritage, have transformed preservation practices across the globe. But what happens when this bottom-up model encounters a millennia-old, top-down social system? Ecomuseums and Living Heritage in China moves beyond theoretical debate to present a groundbreaking, empirical study of this very clash.

Housing Standardisation and Design Governance

Sam Jacoby , Alvaro Arancibia

This book examines how housing design governance shapes the quality of homes and the wellbeing of residents, analysing the political, economic, social, historical, and environmental drivers of design. Combining historical, technical, and social perspectives, this interdisciplinary design research study provides a multidimensional understanding of housing quality. It offers practical insights for policymakers, housing providers, and designers, showing how lived experience can inform future standards and policies to create more inclusive, adaptable, and sustainable homes and communities.

Imaginative Reasoning in the Shaping of Buildings

Sonit Bafna Georgia Institute of Technology, Atlanta, Georgia, USA

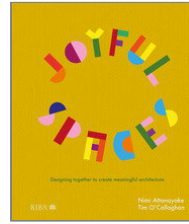

Imaginative Reasoning in the Shaping of Buildings proposes that buildings evoke the viewer's recreative imagination and this matters to the shaping of buildings. Author Sonit Bafna argues that three topics in human cognition—explanation and interpretation, attention, and imagination—support this idea, and he draws from psychology, studies of vision, aesthetics, and philosophy of mind and science.

Joyful Spaces

Designing Together to Create Meaningful Architecture

Nimi Attanayake , Tim O'Callaghan

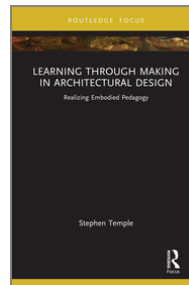

To be joyful is to experience, express or cause great pleasure and happiness. But how can uplifting spirit be conveyed in built form? What makes a joyful space, and how do you design one? To be joyful, spaces have to resonate with the people who use them. Joyful Spaces dives into the collaborative design process, exploring how to connect meaningfully with clients and communities – through briefing games and activities, mood boards and sensory tools – to produce beautiful, functional designs, rich in colour, texture and crafted detail.

Learning through Making in Architectural Design

Realizing Embodied Pedagogy

Stephen Temple

Series: Routledge Focus on Design Pedagogy

Design education begins with the student's embodied experience of the world, yet this foundational aspect often goes unexamined in the development and implementation of design pedagogy. Instructors may take for granted the complexities of learning design, while students grapple with muddled thinking as they navigate unfamiliar methods and concepts. This book reimagines design pedagogy, not as a transfer of abstract knowledge, but as a transformative process rooted in the student's own sensations, inquiries, and lived experiences.

Routledge
August 2026 : 156pp
Hb: 978-1-032-85033-7 : £55.99

Life Cycle Thinking for Architectural Design

Naomi Keena

This book provides an accessible and holistic understanding of life cycle assessment, allowing readers to build life cycle thinking into their design process. Life cycle analysis is becoming more common place in architectural discussion to understand embodied carbon in buildings. However, life cycle cost analysis and social life cycle analysis are often not considered. By combining these methods of analyses a clear understanding of the environmental, economic, and social aspects of the entire life cycle of a building and its design emerges. This will be an essential resource for all beginning architects and designers.

2ND EDITION

Nature Inside

A biophilic design guide

William D. Browning, Catherine O. Ryan

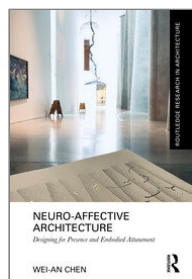

Biophilic design brings positive experiences of nature into the built environment — whether in a domestic, work, leisure, healthcare, education or retail setting. Written by proponents, who are also leading expert practitioners, this updated version is a key design guide to biophilia for architects and interior designers. By raising awareness of biophilic design as a strategy to support psychological and physiological wellbeing, *Nature Inside** illustrates how it can be implemented, across a range of international case studies. It offers a plethora of practical insight and real-world solutions for all designers.

Neuro-Affective Architecture

Designing for Presence and Embodied Attunement

Wei-An Chen

Series: Routledge Research in Architecture

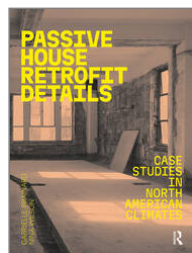

This book is about the inner life of buildings—how architecture lands in the body, moment by moment, as breath, posture, tension, ease, and attention. Neuro-Affective Architecture will resonate with readers who are curious about presence—what it is, how it arises, and how architecture might serve as a vehicle for cultivating it, while supporting regulation of the nervous system. It is written for architects and spatial designers, educators, and researchers, especially those working at the intersection of atmosphere, embodied experience, and wellbeing—who want language and methods for designing not only what buildings are, but how they feel to inhabit.

Passive House Retrofit Details

Case Studies in North American Climates

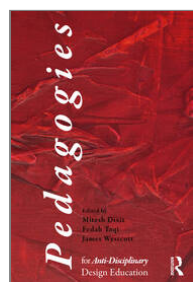

Gabrielle Brainard, Nina Wilson

As we grapple with the climate crisis, experts have projected a need for several million deep energy retrofits on buildings in the U.S. and Canada prior to 2050. Passive House Retrofit Details will equip architects with information critical to understanding and undertaking these complex projects. This book presents 26 case studies of successful retrofit projects in North America, focusing on key technical details and lessons learned during the retrofit process. This book will be a crucial resource for architects working on retrofit projects and upper-level students of architecture, construction and building science.

Pedagogies for Anti-Disciplinary Design Education

Edited by Mitesh Dixit, Fedah Taqi, James Westcott

Pedagogies for an Anti-Disciplinary Design Education assembles methods from 15 contributors – across 12 universities in 10 countries – who are attempting to encompass the trans-scalar conflicts that design must take responsibility for. This book argues that a radical rethink is needed. An anti-disciplinary approach can engage the entangled supply chains, energy regimes, debt structures, border policies, histories of dispossession, and more-than-human ecologies in which design operates. Another design education is not only imaginable but already emerging in the experiments documented here, and it can be pursued without denying the constraints within which most of us work.

Pedagogy as Creative Practice in Architecture

Inspiration and Resistance During Change

Edited by Kasia Nawrotek, Christopher Little

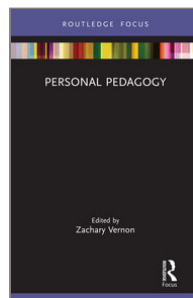

Increasingly, professional pressures frame architectural education as training rather than as an exploratory, experimental process – one that equips students to face unpredictable future challenges in the profession and beyond. In response, many educators develop a hidden curriculum: an implicit set of values, methods, and priorities that sit alongside formal learning outcomes. This hidden curriculum tends to privilege curiosity, criticality, and open-ended inquiry, often through interdisciplinary and art-based approaches. This book shines a light on those creative pedagogical practices.

Personal Pedagogy

Encouraging the Individual in the Classroom

Edited by Zachary Vernon

Series: Routledge Focus on Design Pedagogy

This book presents five distinct examples of pedagogy within or connected to creative fields, offering insights into various approaches to making education more personalised for students. Its aim is to provide creative arts educators with practical examples and contemporary philosophies on how to embrace and leverage students' individuality as a teaching tool. By doing so, it seeks to enhance critical thinking, engagement, and active learning in the classroom.

Plastic Futures in Architecture

From Recycled Synthetic to Bio-Based Polymers

Edited by **Ehsan Baharlou**

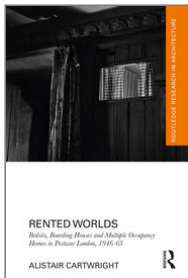

This volume details the recent efforts of developing sustainable approaches to reclaim synthetic polymers and explore natural polymers in design production. Not long ago, plastic was envisioned as a miraculous material. Now plastic pollution has become an inseparable part of the environment. How can the built environment make use of this prolific and 'miraculous' material in an environmentally responsible way? These project discussions will serve as an invaluable resource for students, educators, architects, product designers, practitioners in global sustainability, material innovation, digital fabrication technologies, and computational design.

Rented Worlds

Bedsits, Boarding Houses and Multiple Occupancy Homes in Postwar London, 1946-1963

Alistair Cartwright

Series: *Routledge Research in Architecture*

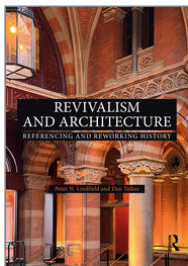

Rented Worlds examines the hidden yet ubiquitous world of bedsits, boarding houses, service flats, subdivided terraces and other forms of private rented housing that continued to dominate postwar London, numerically as well as culturally, well into the 1960s. While the rise of council housing and suburban homeownership have both been thoroughly documented, it was this other kind of housing – declining yet highly contested – that formed the ideological substrate of many key debates about the postwar politics of welfare, 'race', class and gender.

Revivalism and Architecture

Referencing and Reworking History

Edited by **Peter N. Lindfield**, **Dan Talkes**

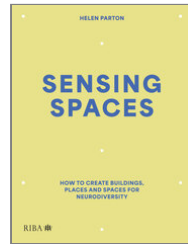

With contributions by leading scholars and emerging names across the disciplines of architecture, architectural history, history, and design, *Revivalism and Architecture* explains and challenges our understanding of the past's impact upon later generations and geographic regions. The essays within this book offer innovative research-based studies across architecture and applied design. They underline and enhance the awareness of revivalism's broader context and utility, and thereby drive scholarship forwards in the ways in which revivalism is conceived and written about.

Sensing Spaces

How to create buildings, places and spaces for neurodiversity

Helen Parton

Neurodiversity isn't a niche – it's a natural part of being human. We now expect our public buildings to meet physical access needs; it's time to turn to the creation of neurodivergent-inclusive spaces. *Sensing Spaces* is your guide to making that essential shift in the built environment. Drawing from recent research and real-life stories, the book explores how architecture can better support the 15% of people who are neurodivergent. From the voices of neurodivergent professionals themselves to detailed examples of best practice, this is a compelling blueprint for change.

Situated Ecologies of Care

Edited by **Oren Lieberman**, **Alessandro Zambelli**

Series: *Critiques*

This book specifically situates the concept of 'care' within those practices and discourses which are the entangled relationships of architecture and the humanities. It brings together developed works from a geographically diverse set of contributors, which as a collection offers insights into the possibilities of care's insinuation into the breadth of what we might label 'architecture' in very different international cultural settings. It provides essential reading for students, researchers and academics in this burgeoning area of research.

2ND EDITION

Social Housing

Definitions and Design Exemplars

Abigail Batchelor, **Paul Karakusevic**

Architects are at the forefront of a new generation of social housing projects that are playing a crucial role in the reinvention of cities. Public housing is a growing sector undergoing a huge period of change. As local authorities and design practitioners take on the housing crisis, they must navigate contemporary issues of sustainability, climate change and social equity, as well as fire safety in the wake of Grenfell. *Social Housing* provides a roadmap. This new edition of the landmark 2017 volume showcases the best affordable housing from across the UK and Europe.

2ND EDITION

Solving Critical Design Problems

Theory and Practice

Tania Allen North Carolina State University, Raleigh, North Carolina, USA

A mix of design thinking, application and case studies, *Solving Critical Design Problems: Theory and Practice* is a practical resource book for beginning designers to engage in more critical practice. It explores how design is increasingly used to solve large, complex, modern-day problems that span design disciplines and worldviews. With over 100 images to help support and explain the ideas presented in the text, this book will appeal to students in design studios, industrial and product design, as well as landscape and urban design.

Studio Thinking in Interior Design

Cultivating Creativity, Process, and Practice

Reza Ahmadi , Sarah Alfaro

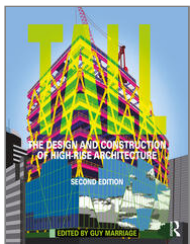

This book is a practical and reflective guide to how interior designers learn, think, and create. It demystifies the concept of studio thinking and translates it into clear habits, tools, and workflows that support imaginative, ethical, and evidence-informed design practice. Organized in four parts, the book provides a structured path from curiosity to concept and ultimately to realized projects. By the end of the book, students, educators, and early-career practitioners will be equipped to organize purposeful studio processes, lead constructive critiques, document and evaluate design decisions, and confidently carry studio thinking into professional practice.

2ND EDITION

Tall: the design and construction of high-rise architecture

Edited by **Guy Marriage** Victoria University of Wellington, New Zealand

This second edition of *TALL* has been updated with new information about the construction of high-rise architecture. A lot has happened in the world since 2019 when the first edition was published and so the updates respond to these changes. In addition to the existing illustrations, there are 34 new illustrations in clear black and white, to assist further understanding of the revised material. Overall, this new edition continues to provide a practical guide and desk-reference to any architect or architecture student embarking on a tall building project.

The Adaptive Home

Supplementary Space Design for an Uncertain Future

Sam Moshaver , Bertug Ozarisy

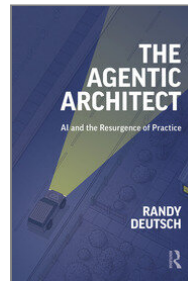

This book aims to provide a comprehensive guide for architects, urban planners, and developer on designing and retrofitting multi-family housing to meet the evolving needs of residents in a post-COVID world. By bridging theory and practice, this book seeks to transform how we conceive and construct multi-family housing. It provides a roadmap for creating homes that can evolve with changing lifestyles, demographic shifts, and unforeseen global challenges. Ultimately, this work aims to contribute to the development of more resilient, sustainable, and human-centered urban environments that can adapt to future needs while improving the quality of life for residents.

The Agentic Architect

AI and the Resurgence of Practice

Randy Deutsch

Architectural education and the profession are at a crossroads, grappling with the climate crisis, housing shortages, migration, and the omnipresent rise of AI. While AI excels at generating visuals, its true value for architects lies not in replicating existing strengths, but in solving practical, time-consuming problems. This frees architects to tackle larger societal challenges and leverage their core competencies for the public good. *The Agentic Architect* explores how current and future architects can harness AI to become indispensable. *The Agentic Architect* is a high-level, tool-agnostic resource for students, faculty, design professionals, and firm leaders.

The AI Design Revolution

From Representation to Agentic Architecture

Neil Leach , Wanyu He , Daniel Bolojan , Theodoros Galanos

The AI revolution is here. Now that AI has been unleashed, nothing will be the same again. But what will be the impact of AI on architectural design? *The AI Design Revolution* offers an accessible and engaging introduction to the relevance of artificial intelligence to architecture and how it is transforming the field. This is essential reading for students of architecture and professional architects alike.

The Architectural Laboratory

Performing Design Research

Edited by **Janno Martens, Rajesh Heynicks, Filip Mattens, Stéphane Symons** KU Leuven, Belgium

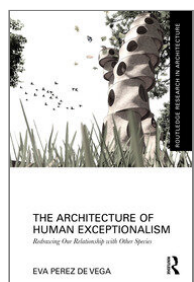

Over the past thirty years, the number of architectural laboratories has surged from a handful to hundreds across the globe. Yet the term remains elusive: What defines an architectural lab? And why has it become so compelling to architects today? Essential reading for architectural historians, theorists, practitioners, educators, students, critics, and curators, *The Architectural Laboratory* offers a compelling lens through which to understand the evolving role of experimentation in architectural practice.

The Architecture of Human Exceptionalism

Redrawing Our Relationship with Other Species

Eva Perez de Vega

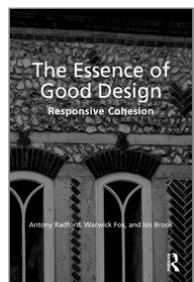

Series: Routledge Research in Architecture

This book challenges the assumption that architecture is a human-centered endeavor and calls for a fundamental shift in how we engage with the built environment. By examining how speciesist assumptions rooted in human exceptionalism shape architectural thought and practice, it asks how architecture might respond differently in a world defined by ecological entanglement rather than human dominance.

The Essence of Good Design

Responsive Cohesion

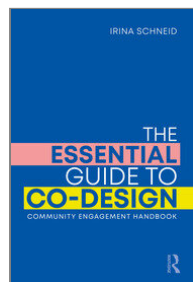

Antony Radford, Warwick Fox, Isis Brook

Written by a designer and two philosophers, this short, highly illustrated book explores the idea that responsive cohesion is the essence of good design. The book shows how these ideas illuminate and can be applied to a wide range of design areas, ranging from gardens and domestic objects to architecture, urban design and cultural landscapes. Both accessible and rigorous, this book is essential reading for designers and a compelling introduction for those interested in design.

The Essential Guide to Co-Design

Community Engagement Handbook

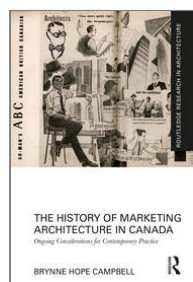

Irina Schneid

The *Essential Guide to Co-design* introduces readers to a collaborative design practice grounded in everyday knowledge, lived experience, and shared imagination. Written for designers, educators, students, and community members, the book offers practical resources for implementing co-design processes in real time. At its core, this book is an open invitation to participate. Readers are invited to engage with the book's accessible format, embedded activities, prompts, and colorful illustrations as they take part in shaping processes and places that matter most to them and their communities.

The History of Marketing Architecture in Canada

Ongoing Considerations for Contemporary Practice

Brynne Hope Campbell

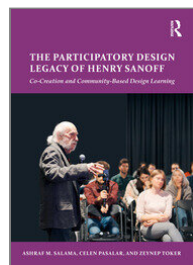

Series: Routledge Research in Architecture

This book examines Canadian architects' evolving relationship with marketing, tracing how regulatory restrictions, professional identity, and cultural values shaped attitudes toward promotion. Through analysis of *The Canadian Architect* magazine, key historical milestones, and firm case studies, it demonstrates that marketing is integral to practice, revealing its role in communicating value, shaping public perception, and redefining architectural identity.

The Participatory Design Legacy of Henry Sanoff

Co-Creation and Community-Based Design Learning

Ashraf M. Salama University of Northumbria, UK, **Celen Pasalar, Zeynep Tokar**

For more than six decades, Sanoff has reshaped how architects, planners, educators, and communities collaborate in the designing and planning environments that shape everyday life. Through reflections, scholarly contributions, and case-based insights, it shows how participatory processes, rooted in dialogue, empathy, and shared authorship, reposition communities as active partners in defining the environments they inhabit. More than a reflection on Sanoff's legacy, the book is a forward-looking call to action. It invites educators, students, architects, urban designers, and scholars to continue advancing participatory practices in architectural and planning education and practice.

The Reflective Architect

Practice and Presence in a Changing Profession

Chad Reineke

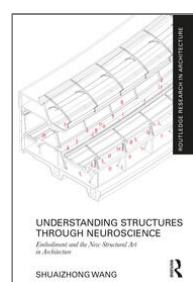

Architecture is changing faster than ever - technologically, economically, and culturally. Yet amid this transformation, one thing endures: the architect's capacity for attention. Practice and Presence is a book about how that capacity - our ability to listen, discern, and care - defines the profession's future more than any new tool or trend. Drawing on two decades of teaching, practice, and research, Chad D. Reineke reflects on what it means to sustain meaning in an age of speed. Ultimately, it offers a simple but radical idea: that the future of architecture will not be built by machines or markets, but by those who remain awake to what truly matters.

Understanding Structures through Neuroscience

Embodiment and the New Structural Art in Architecture

Shuaizhong Wang

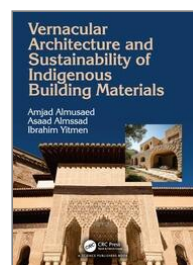

Series: Routledge Research in Architecture

Drawing on the recent findings of neuroscience, this book invites readers to rethink the issue of structural expression through the lens of embodiment. This book begins by exploring an often-overlooked yet ambiguous perspective on structural expression in architectural design. It reveals how structural expressiveness is profoundly shaped by evolving conceptions of the body and analogies between the body and structure.

Vernacular Architecture and Sustainability of Indigenous Building Materials

Amjad Almusaed , Asaad Almssad , Ibrahim Yitmen
School of Engineering, Jönköping University, Sweden

Placing vernacular knowledge at the forefront of climate-responsive design, this book deals with the UN's SDG 11 mandate for inclusive, safe, and resilient cities. The volume also reviews how millennia-old building traditions can decarbonise construction and fortify communities against escalating climate risks. Comprising case studies, and pertinent infographics, it equips practitioners, educators, and decision-makers with the scientific rigour and persuasive language necessary to leverage vernacular intelligence for decarbonisation, equity, and cultural continuity.

Whiteness, Space, and the Architecture of Exclusion

Abigail Muchecheti

Series: Minorities in Architecture

Whiteness, Space, and the Architecture of Exclusion examines how institutional spaces, lecture theatres, corridors, offices, and boardrooms actively shape who belongs and who is marginalised. While diversity and inclusion efforts often focus on representation, leadership, and policy, this book argues that space itself is a critical and overlooked dimension of inequality.

Women in Housing Design History

Katy Chey

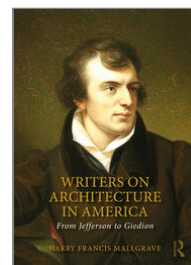

This book examines the women whose contributions significantly shaped housing management, policy and design. It highlights how these women leveraged their experiences, opportunities, and in some cases, social and economic advantage to promote progressive models of housing and community building. Their contributions extended beyond just improving housing. By illuminating these pioneers' achievements, many of whom were underrecognized in their own time, this work offers a reappraisal of women's roles in shaping the housing environment. This book encourages readers to reconsider the history of housing, by looking at it through gender and interdisciplinary perspectives.

Writers on Architecture in America

From Jefferson to Giedion

Harry Francis Mallgrave

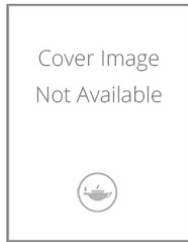

This book brings together an episodic collection of voices—male and female, professional and lay—which compose not a chronicle of building events but tell a story in their own right. It is one related through a series of thematic essays that pose the question of how individuals of a freshly minted country—children and later adolescents in teenage defiance of their Anglo-Saxon past—press the search for a truly national building culture. Is it possible to do so within the span of a century, or two? Is it even desirable? In any case, the goal of a national architectural culture proved to be ever more elusive as efforts intensified.

Your Home Retrofit

How to save energy, reduce carbon and create a comfortable home

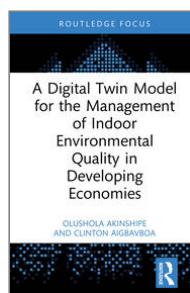

Robert Prewett , Harry Paticas

Do you want to make your home more energy-efficient, comfortable and affordable to run, but don't know where to start? A first of its kind, this comprehensive, richly-illustrated guide to retrofitting homes in the UK is designed to make the process accessible and approachable for everyone. Written by two specialists, this book demystifies the whole retrofit process, giving homeowners, tenants, landlords and professionals the knowledge, tools and confidence to better understand their homes and identify likely packages of appropriate measures.

A Digital Twin Model for the Management of Indoor Environmental Quality in Developing Economies

Olushola Akinshipe, Clinton Aigbavboa University of Johannesburg, South Africa

Series: Routledge Research Collections for Construction in Developing Countries

This book presents Digital Twin in clear and accessible terms, showing how it can be used to improve indoor spaces such as homes, offices, and other occupied environments. It explains how DT can support healthier, more comfortable, and more energy-efficient indoor conditions through intelligent monitoring, analysis, and control. The book provides a practical, step-by-step guide to developing and using DT systems to manage key indoor environmental factors, including air quality, temperature, lighting, and related conditions that affect human well-being and building performance.

Beyond Smart Housing

Bridging Culture, Technology, and Community

Atefeh Sedaghati, Mostafa Behzadfar

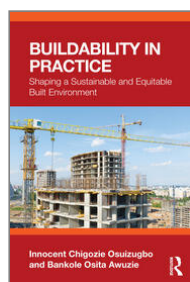

Beyond Smart Housing introduces a holistic understanding of smart living that values both efficiency and empathy, repositioning the idea of smart housing within a human-centered, culturally grounded, and socially aware framework. It argues that genuine intelligence in housing cannot be reduced to devices, data, or digital connectivity alone, but must also encompass cultural meaning, social interaction, and emotional attachment. This book invites scholars and students, urban policymakers, designers, architects to rethink the smart home as a living, learning environment: one that cultivates resilience, inclusivity, and emotional well-being.

Buildability in Practice

Shaping a Sustainable and Equitable Built Environment

Innocent Chigozie Osuizugbo, Bankole Osita Awuzie

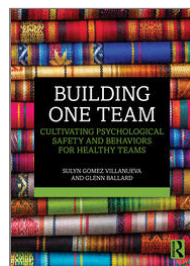

Buildability in Practice: Shaping a Sustainable and Equitable Built Environment explores the often-overlooked concept of buildability in construction, how easily and efficiently a design can be built. It offers practical strategies and real-world examples to improve project outcomes, reduce waste, and promote sustainability. This book serves as a comprehensive educational resource for stakeholders including clients, contractors, and consultants; promoting a shared understanding and fostering collaboration from the early stages of project planning. Buildability is a universal challenge in construction, affecting project efficiency, sustainability, and cost worldwide.

Building One Team

Cultivating Psychological Safety and Behaviors for Healthy Teams

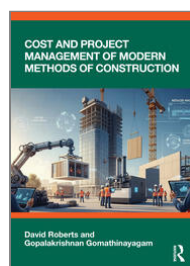

Sulyn Gomez Villanueva, Glenn Ballard University of California at Berkeley, USA

Building One Team offers a practical and research-backed roadmap to cultivating psychological safety and strengthening the behavioral dynamics that shape healthy, high-performing teams. Drawing on research in the construction industry, the book explores what it takes to move from fragmented efforts to cohesive, high-performing collaboration. This book is the essential guide to building thriving, resilient teams for construction project managers, safety professionals, project executives, and team leaders in high-stakes industries who want to improve coordination, strengthen trust, and help their teams truly work as one.

Cost and Project Management of Modern Methods of Construction

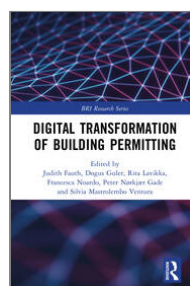

David Roberts, Gopalakrishnan Gomathinayagam

This textbook is aimed at providing students with an insight into the complexities of project management and cost management when working with modern methods of construction (MMC) such as off-site and volumetric construction. Cost Management of Modern Methods of Construction is an essential new textbook for undergraduate and further education students on construction, architecture, built environment and quantity surveying courses, but is also a handy guide for practicing Quantity Surveyors and Project Managers dealing with an increasingly MMC focused industry.

Digital Transformation of Building Permitting

Edited by **Judith Fauth, Dogus Guler, Rita Lavikka, Francesca Noardo, Peter Nørkjær Gade, Silvia Mastrolemo Ventura**

Series: BRI Research Series

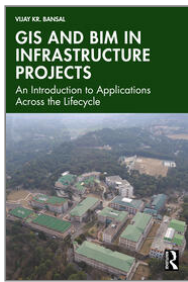

This book represents an initiative to amalgamate research findings from a diverse array of international perspectives on building permits, addressing their innovation and digital evolution. With a comprehensive approach, the publication endeavours to encapsulate global scientific advancements, practices, and takeaways within the realm of digital building permit systems. Ranging through a diverse set of disciplines, related to the different systems and aspects of digital building permitting, it provides stakeholders and researchers with a comprehensive overview, which should be grasped as a whole to allow for real progress in digitalisation of building permit procedures.

GIS and BIM in Infrastructure Projects

An Introduction to Applications Across the Lifecycle

Vijay Kr. Bansal

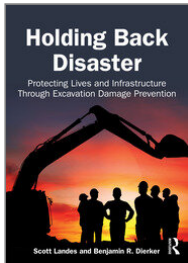

GIS and BIM in Infrastructure Projects: An Introduction to Applications Across the Lifecycle emphasizes that infrastructure lifestyle planning cannot be done in isolation but must consider surrounding facilities, utilities, neighbourhoods, and topography. It serves as a useful classroom resource and self-study manual, addressing the growing need for integrated BIM-GIS solutions in sustainable infrastructure development and lifecycle management.

Holding Back Disaster

Protecting Lives and Infrastructure Through Excavation Damage Prevention

Scott Landes , Benjamin R. Dierker

Holding Back Disaster presents a rare system-level account of excavation damage prevention as a form of critical infrastructure, bringing together the people, systems, and practices that protect people and essential infrastructure every day. Rather than treating utility strikes as a series of isolated failures, it demonstrates how outcomes are shaped by institutional design, incentives, workforce dynamics, data quality, and regulatory fragmentation. This book is essential reading for infrastructure and construction practitioners and leaders who work across excavation, utilities, locating, safety management, and risk.

Industrialized Construction in the Age of AI and Robotics

Xiao Li

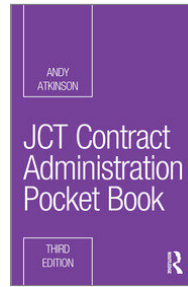

Industrialized Construction in the Age of AI and Robotics explores the transformative convergence of artificial intelligence, robotics, and modern construction methods. This comprehensive textbook reveals how cutting-edge technologies are reshaping the construction industry, offering unprecedented improvements in efficiency, quality, and sustainability. Written for a diverse audience, this essential resource serves as both an academic textbook and a professional reference. Students in Civil Engineering, Industrial Engineering, Construction Engineering and Management, and AI & Robotics programs will find it invaluable for understanding the intersection of these disciplines.

3RD EDITION

JCT Contract Administration Pocket Book

Andy Atkinson London South Bank University

Series: *Routledge Pocket Books*

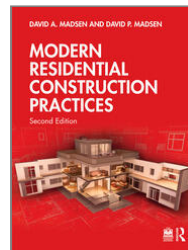

This book is quite simply about contract administration using the JCT contracts. The key feature of the third updated edition is the inclusion of a new chapter covering social responsibility and the JCT contracts, related to the impact of the Building Safety Act, CDM sustainability and value management initiatives. The book continues to be brief, readable and relevant to everyday practice. JCT contracts are administered by a variety of professionals including project managers, architects, engineers, quantity surveyors and construction managers.

2ND EDITION

Modern Residential Construction Practices

David A. Madsen , David P. Madsen Madsen Designs, USA

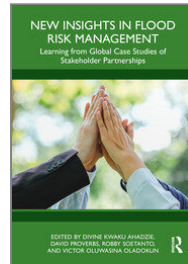

This fully revised second edition of Modern Residential Construction Practices provides easy-to-read, comprehensive, and highly illustrated coverage of residential building construction practices that conform to industry standards in the United States and Canada. An ideal textbook for secondary and postsecondary construction courses and programs, the book is packed with useful features such as problems that challenge students to identify materials and practices, along with research and document information about construction materials and practices, useful summaries, key notes, and a detailed glossary.

New Insights in Flood Risk Management

Learning from Global Case Studies of Stakeholder Partnerships

Edited by **Divine Kwaku Ahadzie** Kwame Nkrumah University of Science and Technology, Ghana, **David Proverbs , Robby Soetanto** University of Coventry, United Kingdom, **Victor Oluwasina Oladokun**

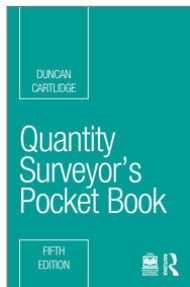

This edited book highlights the innovative ways in which a wide range of public and private stakeholders are collaborating and partnering in an endeavour to co-develop solutions that aim to improve the resilience of communities to flooding. The chapters seek to cut across people, industry, the built environment and the natural environment in highlighting how challenges in partnerships are dealt through effective communication, legal and coordination practices, knowledge production, monitoring and evaluation, social incentives and green financing and funding.

5TH EDITION

Quantity Surveyor's Pocket Book

Duncan Cartlidge Construction Procurement Consultant, UK

Series: *Routledge Pocket Books*

The fifth edition of the Quantity Surveyor's Pocket Book remains a must-have guide for students and qualified practitioners. Its focused coverage of the data, techniques and skills essential to the quantity surveying role makes it an invaluable companion for everything from initial cost advice to the final account stage. This text includes recommended formats for cost plans, developer's budgets, financial reports, financial statements and final accounts. This is the ideal concise reference for quantity surveyors, project and commercial managers, and students of any of the above.

Renewable and Cost-Effective Materials and Structural Systems for the Built Environment and Engineering Sciences

Edited by **Mehmet Serkan Kirgiz**

Renewable and Cost-Effective Materials and Structural Systems for Built Environment and Engineering Sciences offers a comprehensive and forward-looking examination of next-generation binder systems designed to meet the urgent sustainability demands of modern construction. As traditional binders such as Portland cement, construction lime, and gypsum face increasing scrutiny for their environmental impact, this volume provides a timely and essential resource. Through detailed scientific analysis and practical engineering insight, the book explores renewable, composite, and cost-efficient alternatives that reduce ecological harm while maintaining structural performance.

Servitized Business Model Innovation for Improved Circular Economy Performance in the Built Environment

Global South Perspectives and Transition Pathways

Rotondwa Benevolence Nemakhavh, **Bankole Osita Awuzie**, **Clinton Ohis Aigbavboa** University of Johannesburg, South Africa

Series: *Routledge Studies in International Real Estate*

This book addresses the urgent need for sustainable practices in property development, particularly within the South African context. It provides an innovative perspective on the transition from traditional Linear Economy Business Models to Circular Economy Business Models through the lens of Servitized Business Model Innovation. It aims to bridge the gap between academic theory and practical implementation, offering insights, strategies, and frameworks for property developers, policymakers, and other stakeholders to effectively adopt and implement circular and servitized approaches in the built environment.

Smart and Innovative Solutions for a Net-Zero Built Environment

Edited by **Sepani Senaratne**, **Niluka Domingo**, **Srinath Perera** Northumbria University, UK

Series: *BRI Research Series*

Smart And Innovative Solutions for a Net-Zero Built Environment brings together research findings from various scholars around the globe to introduce smart and innovative solutions to achieve a net-zero built environment at different phases of a built asset's lifecycle. It probes into various Industry 4.0 solutions that aim at reducing embodied carbon in multiple construction supply chains. Innovative design approaches such as smart home designs and 3D printed houses are introduced as net-zero carbon solutions within this book.

Socially Successful Projects in the built environment

Demystifying social value and stakeholder engagement

Sarah Fitton, **Simon Wilson**

Series: *Social Value in the Built Environment*

Socially Successful Projects in the built environment will help the reader understand the theory behind a reframed approach to stakeholder engagement using a social value lens. The authors argue that projects in the built environment need to be technically feasible, financially viable, and socially successful. In summary, this is about delivering better projects for both the stakeholders and the project teams. In Socially Successful Projects in the built environment, the authors unravel the complex relationship between social value and stakeholder engagement and reveal a transformative practical theory for effective collaboration and facilitation.

152ND EDITION

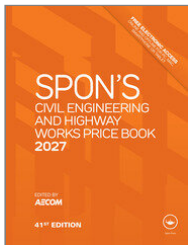

Spon's Architects' and Builders' Price Book 2027Edited by **AECOM** AECOM, London, UKSeries: *Spon's Price Books*

Spon's A&B provides the most accurate, detailed and professionally relevant construction price information for the UK, with a VitalSource® ebook, for use until the end of 2027. Prices have been updated and new items added as expected every year. The book contains thousands of prices for the most frequently used items, hundreds of more unusual items, guidance on wage rates, daywork, cost limits and allowances, property insurance, professional fees, formulae, and design criteria. Although it suits a wide range of project sizes, this is the only price book which sets out a detailed cost base for contracts exceeding £4,000,000 in value and is compiled to NRM.

David Parker University of South Australia

This book explains how property valuation is undertaken for the purposes of taxation and determining compensation for compulsory acquisition in Australia, known as statutory valuation, together with how property valuation is undertaken for financial reporting purposes, or regulatory valuation. Through an analysis of relevant concepts of value, statutes, standards and valuation methods, this book provides the framework within which such valuations are undertaken, being an easy to follow guide to the complex and often arcane world of statutory valuation and the globally applicable requirements of regulatory valuation.

Fulfilling the Vision, 1977-2025

H. Pike Oliver Runstad Department of Real Estate, University of Washington, C. Michael Stockstill

Series: *The American Real Estate Society (ARES) Real Estate Thought Leadership Collection*

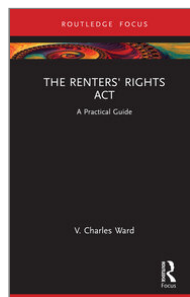

The Irvine Ranch: Fulfilling the Vision, 1977-2026 continues the story of the planning and development of the Irvine Ranch under a partnership of high-powered businessmen to the single ownership of Donald Bren. It chronicles in detail the Irvine Company's success in planning, as well as its strategic approach to major challenges such as the need for infrastructure and responses to anti-growth sentiment and litigation. New generations of urban planners and real estate developers will return again and again to study how Irvine, particularly under Bren's leadership, set the standard for large-scale community development.

The Renters' Rights Act

A Practical Guide

V. Charles Ward

The Renters Rights' Act: A Practical Guide provides comprehensive analysis of the most significant reform to residential tenancy law in England in over 30 years. This timely resource explains the abolition of Section 21 no-fault evictions, the conversion of fixed-term tenancies to periodic arrangements, and the new regulatory framework designed to rebalance power between landlords and tenants during a housing crisis. The book covers the historical context of residential tenancy law, details the new grounds for possession, explains strengthened tenant rights regarding rent increases and property conditions, and outlines the new Private Rented Sector Ombudsman service.

Water Security in Sub-Saharan Africa

Digitalization and Sustainability of Water Infrastructure

Love Opeyemi David , Clinton Ohis Aigbavboa

University of Johannesburg, South Africa, **Nnamdi Ikechi Nwulu**

Series: Routledge Research Collections for Construction in Developing Countries

This book seeks to address the challenges of water scarcity by advancing water security in Sub-Saharan Africa through sustainable digital water infrastructure. It develops comprehensive frameworks that integrate digitalization and sustainability principles into water infrastructure design and management. Beginning with an exploration of water security dynamics and underpinning theories, the book examines the concept of water infrastructure through case studies. Using the Delphi technique, it proposes a sustainability framework encompassing cleaner production, water efficiency, green infrastructure, and the circular water economy.

An Introduction to Film Geography

Foundational Frameworks and the Reel/Real Divide

Chris Lukinbeal

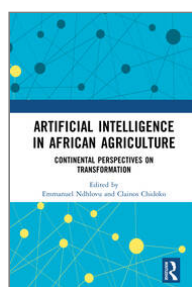

This foundational text establishes a cohesive, systematic framework for film geography. It integrates theories of transactionalism and phenomenology with core elements of communication (Source, Medium, Receiver) to document the transactions between geography and film, specifically emphasizing the resulting ontological distinction between the cinematic "reel" world and the lived "real" world. Aimed at scholars and students interested in humanistic geography, media studies, and film theory, this book serves as an indispensable starting point for academic inquiry.

Becoming Metropolitan

Urban Transformation of 19th Century Newcastle

Peter J. Taylor , Michael Barke , Zachary P. Neal

Series: Routledge Studies in Urbanism and the City

Using a unique data-rich study of Newcastle's becoming of a metropolitan city-region in the 19th century, this book explores a new understanding of how successful cities attain a metropolitan status through disruptions of incessant economic advances being ameliorated by myriad social organizations to create a new vibrant urban environment. *Becoming Metropolitan* will appeal to graduates and researchers of Geography, Sociology, Planning and History specializing in cities and urban studies. It will also be valuable to a larger public audience with interest in cities, as 'metropolitan' is a commonplace idea easily understood, and in the case-study city.

Creating Memories in Community

Edited by **Stephen P Hanna , Amy E Potter**

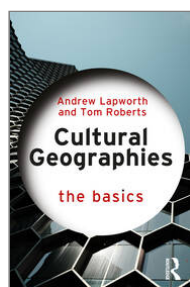

This book brings together a collection of projects that explore how communities use place-based memory to tell their stories, especially those that have been overlooked or marginalised. Grounded in close collaboration with community partners, the contributions examine efforts such as Black history trails in Georgia and Virginia and survivor-led commemorations in Ireland. These projects highlight how memory is not only about the past but also about shaping how places are understood in the present. Across diverse contexts, the authors show how community-driven approaches can challenge dominant narratives and make space for more inclusive and honest representations of history.

Cultural Geographies

The Basics

Andrew Lapworth , Tom Roberts

Series: The Basics

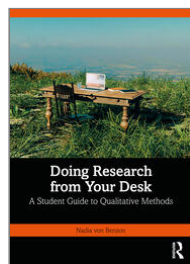

Cultural Geographies: The Basics offers an accessible introduction to one of the most exciting and eclectic fields of academic study available to students today. It unpacks key conceptual and methodological innovations in cultural geography and outlines the new perspectives these offer for making sense of our world. This book will be essential reading for undergraduate students making their first forays into cultural geography, as well as readers and researchers from other humanities and social science disciplines (like Sociology, Media and Film Studies, Anthropology, Cultural Studies, and Philosophy) interested in what a geographical approach to culture has to offer.

Doing Research from Your Desk

A Student Guide to Qualitative Methods

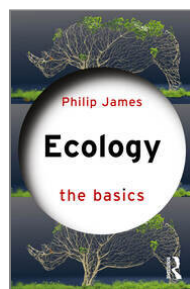

Nadia von Benzon

Doing Research from your Desk: A Student Guide to Qualitative Methods provides invaluable guidance for students conducting high-quality qualitative research remotely. It assists students in generating and analysing qualitative data effectively and efficiently without requiring travel or face-to-face meetings. This book is ideal for both social-science lecturers who teaching qualitative methods and supervise undergraduate and masters-level dissertations, and students, some of whom may be amongst the most vulnerable and marginalised on their courses.

Ecology the basics

Philip James

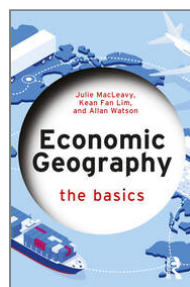

Series: The Basics

The text sets out the fundamentals that underpin ecology – the study of the relations between organisms of the same of different species and between organisms and the abiotic (non-living) environment. In other words, it is the study of where we live. In 'Ecology: the basics' the author synthesises ecological understanding to provide a foundation for first- and second-year undergraduates who are approaching ecology for the first time or are looking to refresh their knowledge. 'Ecology: the basics' also serves as a foundation for those coming to ecology as part of their higher-level studies.

How John Agnew Transformed Geographic Thinking

The Territorial Trap and Beyond

Edited by **Michael Shin**

Series: *Routledge Research in Place, Space and Politics*

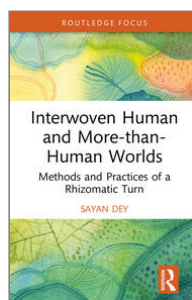

This book explores the intellectual legacy of John Agnew, one of geography's most influential thinkers of the past 50 years. It examines Agnew's transformative thinking on geopolitics, territory, place, and context, demonstrating how his ideas reshaped political geography and continue to inform contemporary scholarship across geography, political science, and international relations. This volume is essential reading for scholars and students in political geography, human geography, international relations, political science, and political sociology. It will appeal to those interested in geographic theory, geopolitical analysis, territory, context, and the concept of place.

Liquid Port Cities of the Twenty-First Century

A Pan-Mediterranean Perspective on Cultural Confluences and Contemporary Challenges

Edited by **Wendy Jo Mifsud , Enrico Tonnarichi**

Series: *Routledge Studies in Urbanism and the City*

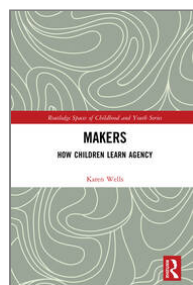

This book provides an up to date overview of Mediterranean port cities and their challenges in a 'liquid' world. It interrogates emerging cultural narratives of these places, new morphological approaches to understand their transformation, and the global pressures and local dynamics that shape them. The book is addressed to scholars and students engaging with port city studies from a wide range of disciplines including urban planning, human geography, urban sociology, maritime anthropology, cultural policy, maritime and naval history.

Makers

How Children Learn Agency

Karen Wells

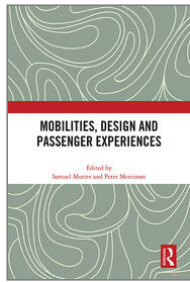

Series: *Routledge Spaces of Childhood and Youth Series*

This book is about how children become competent people who understand and can act on and even transform the world. Its novel framework of 4A agency shows how children participate in making as audience, assistant, apprentice and artisan in makerspaces and in make-believe, music-making and toy-making. Makers: How Children Learn Agency is relevant to Childhood Studies, Sociologists of Education, and 4E Cognition theorists. It will also be of interest to makers, and anyone interested in children's agency and makerspaces.

Mobilities, Design and Passenger Experiences

Edited by **Samuel Mutter, Peter Merriman** Aberystwyth University, UK

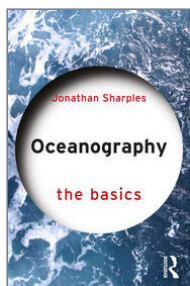

The chapters in this book explore how transport environments, mobility infrastructures, and embodied movement practices have been shaped and 'designed' by a whole host of experts, professionals and political actors for different ends. Examples focus on a range of transport modes in different parts of the world, including buses in urban Chile, underground metro railways in China and the UK, and railways in Sweden and Japan. The book examines the role of architecture and design features in shaping, affording and hindering passenger flows, behaviour and experience, resulting in infrastructures which may include or exclude certain groups of passengers in different ways.

Oceanography

The Basics

Jonathan Sharples

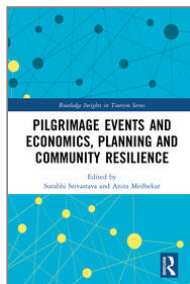

Series: *The Basics*

Earth's oceans are vital for sustaining life on our planet. Oceanography is an intrinsically multidisciplinary science that explores how the ocean does this. The author uses plankton as a focus for the book, drawing together the physics of the ocean circulation, the chemistry of nutrients and carbon, and the biology of the plankton. This is an essential introduction to the field for undergraduates, and includes further resources and short, quantitative diversions for students who want to take the concepts further.

Slow-Onset Hazards

Issue, Challenges, and Risk Reduction Strategies

Edited by **Avijit Sahay, Pallavi Upreti, Nikhil Roy**

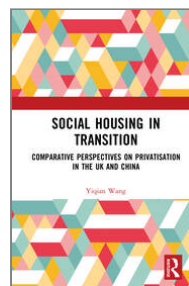

The book provides a comprehensive understanding of slow-onset hazards, combining scientific analysis, policy perspectives, and practical adaptive strategies. This book is intended for undergraduates and postgraduate researchers, as well as those working in geography, geology, sociology, environmental science, public policy, disaster management. It will also appeal to trainees of administrative jobs, planners, and practitioners working on addressing environmental challenges and policy implementation.

Social Housing in Transition

Comparative Perspectives on Privatisation in the UK and China

Yiqian Wang

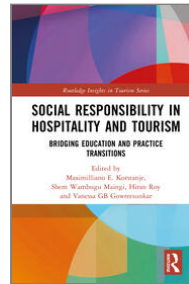

This book compares social housing privatisation in the UK and China, revealing convergent housing outcomes despite contrasting political systems. Both countries show weakened social housing, redefined as financial assets, highlighting shared policy failures and the need to rethink market-driven reforms globally. This book will appeal to professionals and researchers as well as policy makers in the fields of housing studies, urban studies, public policy, political economy, and comparative politics. While its theoretical contributions target academics, the case-study focus will also make it relevant to practitioners designing or evaluating housing policy.

Social Responsibility in Hospitality and Tourism

Bridging Education and Practice Transitions

Edited by **Maximiliano E. Korstanje** University of Palermo, Argentina, **Shem Wambugu Maingi, Hiran Roy, Vanessa GB Gowreesunkar**

Series: *Routledge Insights in Tourism Series*

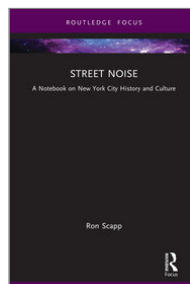

Social Responsibility in Hospitality and Tourism: Bridging Education and Practice offers a comprehensive examination and framework for integrating social responsibility into hospitality and tourism. It provides actionable strategies to bridge the gap between academic theory and professional practice. This book is an essential resource for hospitality and tourism educators, academic researchers, and industry professionals and managers committed to ethical and sustainable practices.

Street Noise

A Notebook on New York City History and Culture

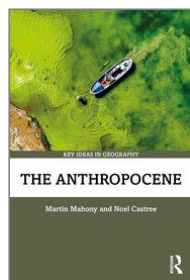

Ron Scapp

Street Noise offers a series of historical and cultural reflections and observations about York City. It presents innovative insights into many day-to-day aspects of New York City that have been ignored or forgotten. Street Noise is a unique mixture of urban studies and cultural theory. Street Noise will appeal to graduate and undergraduate students interested in cultural and social theory, urban studies, architecture, urban design and history. Yet it is a book that is readily accessible to both the tourist and the general reader interested in New York City. It would also be a perfect memento and gift.

The Anthropocene

Martin Mahony , Noel Castree University of Manchester, UK

Series: Key Ideas in Geography

This book offers the most advanced yet accessible introduction to the complex and often heated debates about the meaning, nature and implications of the Anthropocene. Essential reading for university students and researchers in Geography and beyond, this book also appeals to general readers interested in understanding how human actions are reshaping the Earth and what this means for the future of people and planet.

The Fire Commons

Cultural Burning as Multispecies Practice

Marcus Baynes-Rock

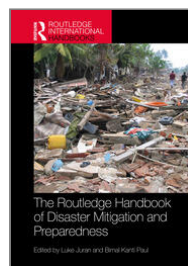

Series: Routledge Human-Animal Studies Series

This book explores the multispecies dimensions of First Nations burning practices and shows how these integrate with Aboriginal ontologies to resist the ideological and structural violence of colonisation. Serving as an intervention in contemporary environmental discourse, advocating for a more holistic and relational understanding of fire in the Anthropocene, this book will appeal to policymakers, conservationists and researchers in the fields of Environmental Sciences, Ecology, Human Geography, Indigenous studies, and Posthumanism.

The Routledge Handbook of Disaster Mitigation and Preparedness

Edited by Luke Juran , Bimal Kanti Paul Kansas State University, USA

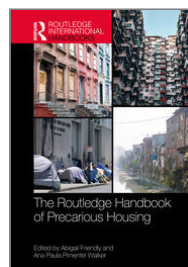

Series: Routledge International Handbooks

The Routledge Handbook of Disaster Mitigation and Preparedness covers the two pre-disaster stages of the disaster management cycle by presenting a comprehensive, cutting-edge overview of their numerous elements. This book is an essential guide and reference not only for scholars engaged in disaster research, but also for undergraduate and graduate students, policy makers, disaster managers, international and supranational agencies, and humanitarian and volunteer organizations engaged in disaster management.

The Routledge Handbook of Precarious Housing

Edited by Abigail Friendly , Ana Paula Pimentel Walker

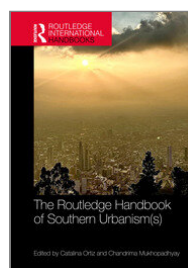

Series: Routledge International Handbooks

The Routledge Handbook of Precarious Housing offers the first comprehensive, interdisciplinary examination of one of today's most urgent global challenges: the growing normalization of insecure, unaffordable, and uninhabitable housing. Essential reading for scholars, practitioners, and advocates, this Handbook reframes precarious housing as a central site through which the politics of habitability, governance, and radical justice are negotiated today.

The Sundarbans Mangrove Ecosystem

Climate Change Impact and its Blue Economy Architecture

Edited by **Ranadhir Mukhopadhyay**, **Somnath Bandyopadhyay**, **Sourabh Kumar Dubey**

This book presents a multidisciplinary chronicle of the Sundarbans. It explores its geological origins, social evolution, ecological transformations, and cultural heritage and illuminates how nature and people have co-shaped the world's largest mangrove delta. This book is valuable for environmental scientists, geographers, historians, policymakers, urban planners, and students of sustainability and development studies. It will also be of interest to NGOs, conservationists, and government agencies and policy makers.

What Future For the Earth?

Speaking for People and Planet in the Anthropocene

Noel Castree

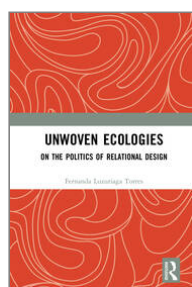

What Future For the Earth? examines a growing landscape of thought ranged across the social sciences, humanities and the arts. Setting geoscience in its wider institutional and epistemological context, this multidisciplinary book addresses a set of key societal questions arising from escalating Earth System change. University students and instructors across a wide range of disciplines will find this book of interest, as will general readers concerned about climate change, biodiversity loss and related problems.

Unwoven Ecologies

On the Politics of Relational Design

Fernanda Luzuriaga Torres

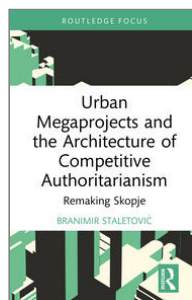

This book presents a sophisticated conceptual toolkit to address the spatial complexities of the coloniality of power and extractivism. Redefining urbanism as cosmic diplomacy, it proposes a relational framework to navigate conflicts through the interdependence of bodies and ecosystems. Unwoven Ecologies: On the Politics of Relational Design is intended for academics, researchers, and postgraduates in the fields of urban studies, political ecology, and decolonial theory.

Urban Megaprojects and the Architecture of Competitive Authoritarianism

Remaking Skopje

Branimir Staletović

Series: *Routledge Research in Place, Space and Politics*

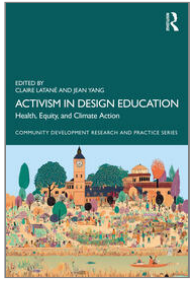

This book presents how urban megaprojects uniquely expose the complexities of competitive authoritarianism. Through an analysis of Skopje 2014, it argues that accelerated, symbolically charged urban transformation reveals how such regimes govern space, manage constraint, and assemble power through the intertwined dynamics of implementation, ideology, and resistance. The book is intended for scholars and students in political science, sociology, and urban studies along with historians interested in the politics of urban space and long-term patterns of development.

Activism in Design Education

Health, Equity, and Climate Action

Edited by **Claire Latané, Jean Yang**

Series: *Community Development Research and Practice Series*

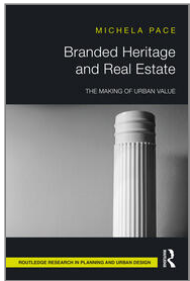

Activism in Design Education shows how design pedagogy can become a form of public action, proving universities are not just places of learning, but engines for real-world change. The book showcases design educators from across the United States who are using their studios and seminars as incubators for activism. These educators embed activism into their pedagogy, engaging students in community projects that drive social and environmental justice and repair. For educators and students, institutions and community members, this book provides a roadmap and inspiration to align design education with community priorities and to translate learning into community care.

CAD in Landscape Architecture

Bharti Sao, Richa Sao, Anita Kerketta

This book addresses computer-aided design (CAD) in landscape architecture for students, professionals, and educators. It covers principles and foundations of CAD, technical workflows, and two-dimensional drafting techniques for landscape design. The book examines three-dimensional modeling in ARCHICAD including dimensioning, visualization, detailing, and organizational tools, including 2D drawing techniques for gardens, data integration, and expressive tools for digital representation. This title has been co-published with Elite Publishing House. T&F does not sell or distribute the print versions in India.

Chinese Collaborative Planning in the Digital Era

Institutions, Power Relations, and Public Spheres

Edited by **Yanliu Lin, Hongmei Lu**

Series: *Routledge Research in Planning and Urban Design*

Chinese Collaborative Planning in the Digital Era: Institutions, Power Relations, and Public Spheres is the first accessible text on theoretical underpinnings and extensive case material on China's collaborative planning. It questions the validity of agonistic and communicative approaches and lays out a new theoretical framework for collaborative planning in China.

Climate and Biodiversity in Infrastructure

Edited by **Spiro N. Pollalis, Evgenia Hagistavrou**

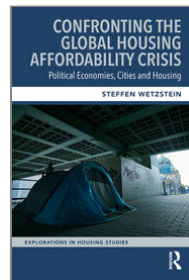

Climate and Biodiversity in Infrastructure proposes a high-level conceptual framework to holistically capture how integrated climate and biodiversity action is defined at the infrastructure project level. At its core, it proposes a set of criteria to jointly address two of the most significant, concurrent, and interconnected crises of our time: climate change and biodiversity loss. These criteria aim to mainstream biodiversity into climate, and vice versa, as a way to achieve multiple goals. This book will be especially useful to decision-makers in countries with mandates for net zero carbon, and for students in urban design, planning, and engineering.

Confronting the Global Housing Affordability Crisis

Political Economies, Cities and Housing

Steffen Wetzstein

Series: *Explorations in Housing Studies*

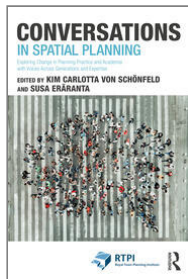

This timely book problematises growing structural housing unaffordability and the lack of affordable housing across the advanced economic world. It offers both a historically and geographically sensitive critique of why we face these issues and struggle to adequately respond, and informed speculation towards addressing this crisis collectively, equitably, and longitudinally.

Conversations in Spatial Planning

Exploring Change in Planning Practice and Academia with Voices Across Generations and Expertise

Edited by **Kim Carlotta von Schönfeld**, **Susa Eräranta**
Series: *RTPI Library Series*

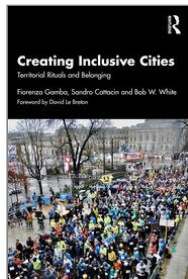

Planning is a complex field, in which varied perspectives, politics, and potential actions are constantly negotiated. Instead of proposing a single, homogenized response to key contemporary challenges, this book keeps apparent the divergent voices of people within the field of Planning. Topics include how social learning can and should be approached in planning; how important (dis)comfort can be in planning; the role of arts and science in this field; and activism in planning research. The book serves as an empowering tool for students, practitioners, academics, and lecturers in the field of planning to find distinct voices to engage with these pressing debates.

Creating Inclusive Cities

Territorial Rituals and Belonging

Edited by **Fiorenza Gamba**, **Sandro Cattacin**, **Bob W. White**

Creating Inclusive Cities explores urban inclusion through the lens of territorial rituals. Through detailed comparative analysis of urban rituals across Geneva, Montreal, and Turin, the book demonstrates how territorial rituals serve as powerful tools for creating belonging and social cohesion in increasingly diverse urban environments. Chapters reveal how successful urban rituals transform urban spaces into sites of meaningful connection. This book is essential for urban planners, academics, and postgraduate students in urban studies, planning, sociology, and anthropology, who seek to build more inclusive and vibrant cities in an era of increasing mobility and diversity.

Designing Signals of Inclusion

A Framework for Fostering Shared Neighborhoods

Edited by **Tali Hatuka**, **Lawrence Vale**

Focusing on urban design and planning at the neighborhood scale, this collaborative work explores "signals of inclusion" that convey welcome and belonging in shared urban environments. The book reveals how signals of inclusion operate through multiple sensory mechanisms and processes, and how these can counteract exclusionary or hostile urban design practices and policies. The chapters in Part 1 explore a range of inclusive signals in case studies from around the world. Part 2 presents a toolkit for action in implementing an inclusive design agenda. This book will be of interest to students, scholars, and professionals in the fields of urban design and community development.

De-Siloing Urban Planning

Edited by **Mennatullah Hendawy**

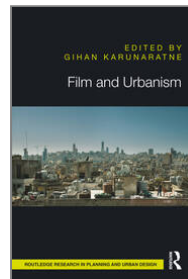

Series: *Routledge Research in Planning and Urban Design*

This book examines why urban planning continues to fall short of its aspirations for equity, sustainability, and resilience. It argues that contemporary challenges cannot be met without fundamentally reconfiguring how knowledge, power, and action are organized. The book presents de-siloing as the essential groundwork for closing the persistent gap between planning ideals and lived urban realities.

Film and Urbanism

Edited by **Gihan Karunaratne**

Series: *Routledge Research in Planning and Urban Design*

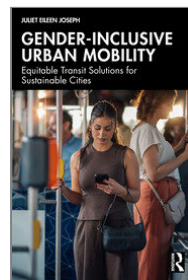

Film and Urbanism contributes to interdisciplinary scholarship by investigating the complex and multidimensional relationship between the city and film as a practice. Moving beyond the idea of a recording and representation method alone, film is approached here as a critical spatial practice that contains elements of design, with a capacity to reveal, interrogate and interact with the shifting social and political dimensions of urban life.

Gender-Inclusive Urban Mobility

Equitable Transit Solutions for Sustainable Cities

Edited by **Juliet Eileen Joseph**

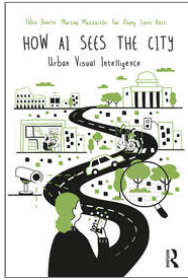

This book critically examines the intersection of gender, governance, and urban mobility through the lens of transit systems in postcolonial and developing countries. Drawing on postcolonial feminist and intersectional theories, it analyses how historical legacies, socio-economic structures, and systemic inequalities have shaped the governance and accessibility of urban transit systems and highlights the compounded challenges women encounter in navigating these systems. The book will be of interest to researchers, students, and faculty in interdisciplinary fields such as gender studies, public administration, feminist studies, international relations, and urban planning.

How AI Sees the City

Urban Visual Intelligence

Fábio Duarte Pontifícia Universidade Católica, Brazil, **Martina Mazzarello**, **Fan Zhang**, **Carlo Ratti**

This groundbreaking book examines how artificial intelligence (AI) is revolutionizing our understanding of cities, and presents a comprehensive framework for applying visual AI in urban contexts. The book traces the evolution of visual analysis in urban studies, from early photographic documentation to today's AI-powered insights about urban patterns, human behavior, and social dynamics in cities. Chapters address critical concerns about surveillance, privacy, and algorithmic bias, offering a nuanced perspective on the ethical implications of urban visual intelligence. This book is essential for scholars and postgraduate students in urban planning and landscape architecture.

Infrastructure and Planning in Central and Eastern Europe

Tackling the Challenges of Major Road Investments

Cover Image
Not Available

Edited by **Tomasz Komornicki** Maria Curie-Skłodowska University, Lublin, Poland, **Maciej J Nowak**

Series: *Routledge Research in Planning and Urban Design*

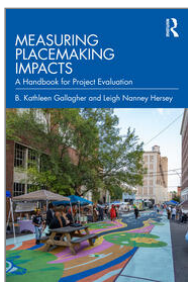

The book will compare and contrast the key problems associated with the planning and implementation of major road investments in selected Central and Eastern European (CEE) countries: Bulgaria, Estonia, Hungary, Latvia, Lithuania, Poland and Romania. The CEE countries serve as an excellent research field, as no group of states in history has ever had access to such substantial external funding for infrastructure development within a short time frame. At the same time, investment outcomes have varied significantly across individual countries. Spatial planning systems are often cited as one of the factors determining the scale and pace of transport investments.

Measuring Placemaking Impacts

A Handbook for Project Evaluation

B. Kathleen Gallagher, **Leigh Nanney Hersey**

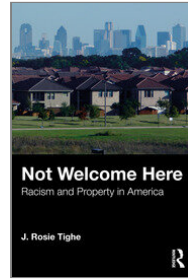

This book addresses the critical gap in placemaking evaluation by providing methodologies and practical tools for developing holistic and consistent approaches to measuring the impacts of placemaking projects. The authors integrate history and theory of placemaking with the practice of reporting the impacts of placemaking projects to stakeholders, enhancing public accountability and transparency. Chapters provide a comprehensive framework for designing evaluation systems tailored to various placemaking projects. This book is essential for scholars, practitioners, and stakeholders of placemaking projects, and students in urban planning, urban design, and public administration courses.

Not Welcome Here

Racism and Property in America

J. Rosie Tighe

This book examines the history and current context of racism in housing and neighborhoods to understand how racism and white supremacy have hindered true equality. It explores how Americans use various means— from racial intimidation to restrictive zoning—to exclude entire races and classes of people from their neighborhoods and communities. We live in a society that claims to value diversity—of opinions; of religions; of perspectives; of race—but Tighe shows how spatial segregation and inequality present in society fails those values. The book will be of interest to academics, researchers, policymakers, planners, and advocates working in urban issues such as housing, race, and class.

Place and Placemaking

Edited by **Conrad Kickert**, **Camden Miller**, **Robert Shibley**

Series: *Debates on Urban Excellence*

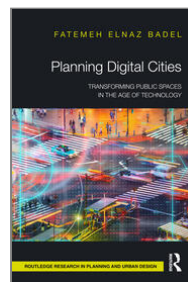

This book focuses on the importance of place and the multifaceted process of placemaking to the creation of durable and meaningful urban environments. It features international thought leaders, curated and convened across disciplines, cultures, and viewpoints to debate their perspectives on the merits and challenges of place and placemaking. Chapters investigate the tenor, timeliness, and tensions of place, and how we envision, co-create, and communicate place with colleagues, citizens, and critics. This book will be of interest to students and practitioners in urban planning, urban design, real estate, architecture, and landscape architecture.

Planning Digital Cities

Transforming Public Spaces in the Age of Technology

Fatemeh Elnaz Badel

Series: *Routledge Research in Planning and Urban Design*

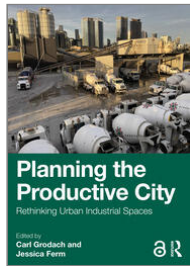

This book explores how digital technologies are reshaping urban public spaces, transforming social interactions, civic engagement, and cultural experiences in cities globally. Through detailed case studies from Singapore, Barcelona, Tokyo, Amsterdam, Istanbul, New York City, Boston, Seattle, Vancouver, Montreal, Medellín, Bogotá, Canberra, and Cape Town, it examines innovative digital solutions like smart waste management systems and citizen engagement platforms, assessing their profound impact on urban safety, mobility, and accessibility.

Planning the Productive City

Rethinking Urban Industrial Spaces

Edited by **Carl Grodach**, **Jessica Fenn**

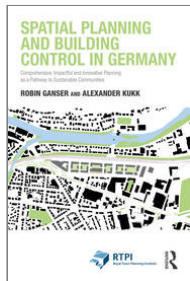

This book focuses on the overlooked role of industry and industrial land in contemporary urban development. Bringing together detailed studies of over 25 cities in 14 countries (including the US, UK, Canada, Italy, Germany, South Korea, and Turkey), this comprehensive volume puts the diverse forms, geographies, and conflicts over urban industrial land and productive activities at the center of discussions around the future of cities. This book is the first to comprehensively explore the challenges and opportunities of achieving these goals through planning the productive city and is essential for students, researchers and professionals across the range of urban studies fields.

Spatial Planning and Building Control in Germany

Comprehensive, Impactful and Innovative Planning as a Pathway to Sustainable Communities

Robin Ganser, **Alexander Kukk**

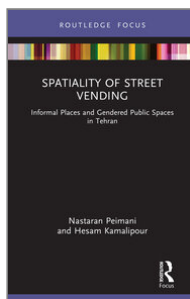

Series: *RTPI Library Series*

This book guides readers to a better understanding of the German planning system and its responses to the critical challenges of 21st century spatial planning, such as patterns of shrinkage and growth, demographic change, and environmental challenges. It explores the legal framework and offers in-depth insights into the content, process, and implementation of comprehensive spatial plans. The book is written for an international readership and will be of use to students, scholars and practitioners of urban planning looking to address the vital challenges facing communities today.

Spatiality of Street Vending

Informal Places and Gendered Public Spaces in Tehran

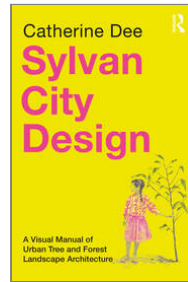

Nastaran Peimani, **Hesam Kamalipour**

This book reframes street vending beyond depictions of marginality or disorder, exploring how informal street vending works as a situated, negotiated, diverse, relational, and gendered practice within contested public spaces. Bringing together a critical review of scholarship with an assemblage-informed methodological framework, it positions informality as relational and spatially embedded, emerging through interactions among mobility, public space edges, pedestrian flows, governance, street life, and everyday survival.

Sylvan City Design

A Visual Manual of Urban Tree and Forest Landscape Architecture

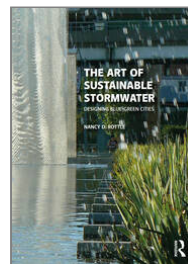

Catherine Dee University of Sheffield, UK

A sylvan city is foremost 'made, shaped or formed of woods or trees'. Catherine Dee sets out to demonstrate how and why settlements may be better designed by considering trees as the indispensable 'ground' of a city. Richly illustrated with the author's drawings, this visual manual provides a concise and practical introduction to contemporary urban landscape architecture with trees and forest. Aimed at student and professional landscape architects and environmental designers, the manual will also appeal to other urban disciplines and to communities engaged with neighbourhood spaces in the context of the potential for trees to transform city living.

The Art of Sustainable Stormwater

Designing Blue-Green Cities

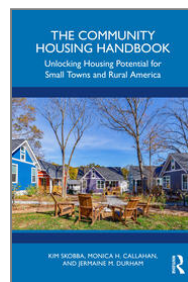

Nancy D. Rottle

The Art of Sustainable Stormwater: Designing Blue-Green Cities explores how stormwater can become an amenity when designers artfully capture, detain, treat and re-use rainwater, using it to generate more habitable and environmentally sustainable cities. Taking a global approach, it provides useful planning and design principles and tools and illustrates inspiring case studies demonstrating how stormwater can contribute positively to natural systems, urban infrastructure, neighborhoods, parks, plazas, streets, and buildings. This book is essential for practitioners and students of landscape architecture and related environmental design fields.

The Community Housing Handbook

Unlocking Housing Potential for Small Towns and Rural America

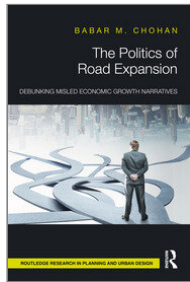

Kim Skobba University of Georgia, **Monica H. Callahan**, **Jermaine M. Durham**

This book provides practical tools for driving meaningful change in housing. Chapters explore the pivotal role of housing for individuals and communities, shedding light on how small town leaders often act only when prompted by crisis or opportunity. The authors furnish a blueprint outlining essential components for crafting and executing a housing strategy tailored to the unique needs of rural communities. The book culminates in a compelling call to action, coupled with a concise guide to best practices and common pitfalls in community housing efforts. It is ideal for community leaders and practitioners, and students in urban and regional planning as well as community development.

The Politics of Road Expansion

Debunking Misled Economic Growth Narratives

Babar M. Chohan

Series: Routledge Research in Planning and Urban Design

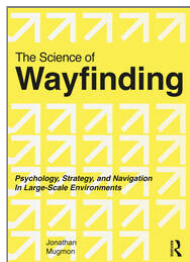

This book investigates how arguments for economic growth are perceived and advanced to promote road investment across the world. In literature, the relationship between building roads and achieving economic growth is heavily reliant on quantitative tools while ignoring the contextual details of roading projects. Using the Aristotelian concept of phronesis, the research undertakes six case studies from New Zealand, Britain, the US, Pakistan, Brazil and Kenya.

The Science of Wayfinding

Psychology, Strategy, and Navigation in Large-Scale Environments

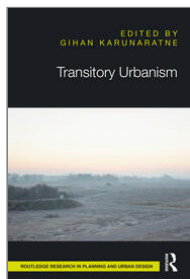

Jonathan Mugmon

The Science of Wayfinding is the first comprehensive book to focus on the planning, psychology, and strategic development of wayfinding systems, revealing the underlying framework that makes navigation truly intuitive in today's most complex environments. Drawing on over 25 years of global project experience, from Olympic stadiums and Super Bowl venues to convention centers and entertainment districts, the author offers a tested methodology that blends human-centered design, behavioral analysis, and operational planning. This book equips professionals to create environments that welcome, orient, and empower everyone who enters.

Transitory Urbanism

Edited by **Gihan Karunaratne**

Series: Routledge Research in Planning and Urban Design

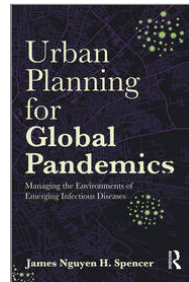

This book explores how cities are continuously formed and reformed through movement, negotiation, and uncertainty. Rather than viewing transience as an anomaly, it positions instability, mobility, and variation as fundamental to urban life, forces that actively shape cities rather than disrupt them. The volume explores temporary architectures, mobile infrastructures, and adaptive practices that emerge in response to regeneration, environmental pressures, migration, and precarity. It pays particular attention to small, short-lived interventions, improvised shelters, shifting spatial uses, and informal forms of organisation that can evolve into more enduring transformations.

Urban Planning for Global Pandemics

Managing the Environments of Emerging Infectious Diseases

James Nguyen H. Spencer

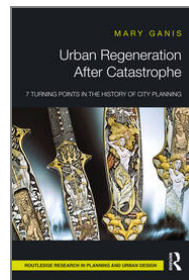

This book gathers the scientific evidence outlining the origins of emerging infectious diseases to show how a landscape-based ecosystem approach can lead to policy alternatives that draw on the expertise of planning for future pandemic prevention and management. Summarizing evidence from past pandemics and using case examples, this book provides planners with innovative ideas to help the field efficiently understand core health ideas that align with planning expertise. This book is essential for students in urban planning and public health courses, as well as all built environment professionals and practitioners tasked with reducing the risks of the next pandemic.

Urban Regeneration After Catastrophe

7 Turning Points in the History of City Planning

Mary Ganis

Series: Routledge Research in Planning and Urban Design

This book examines how catastrophes—natural, technological, ideological, biological, and socioeconomic—transform urban design and planning, potentially creating "turning points" in a city's development trajectory.
