A Laboratory Manual in Biophotonics

Vadim Backman, Northwestern University, Evanston, Illinois, USA, Adam Wax and Hao F. Zhang

The increasing use of optical techniques for biomedical applications has led to significant interest in biophotonics as a growing field. From its basic concepts to more advanced topics and applications, this book provides a complete guide to biophotonics. The author offers both descriptive and quantitative perspectives as well as a comprehensive overview of major areas of research in the field. The text includes coverage of topics such as light tissue interaction, optical instrumentation, microscopic and macroscopic tissue imaging, tissue spectroscopy, therapeutic applications of optics, and molecular imaging.

Biology for Engineers, Second Edition

Arthur T. Johnson, North Carolina State University, USA.

This book gives a broad-range look at biological systems to establish fundamental understanding of living things from an engineering perspective. It does this by understanding how they relate to their environments and the methods used when dealing with living things. The intent is to give enough familiarity with living things that provides satisfactory solutions to technical problems that can be made using or applied to biological systems at any particular level of complexity. The ancillary benefit of *Biology for Engineers* is that biology can be seen to be quite interesting from an engineering viewpoint.

Biotechnology Fundamentals Third Edition

Firdos Alam Khan, Manipal University, Dubai, UAE

Biotechnology Fundamentals, Third Edition breaks down the basic fundamentals of this discipline, and highlights both conventional and modern approaches unique to the industry. The revised work presents new information on Forensic Science, Bioinformatics, Synthetic Biology, Biosimilars and Regenerative Medicine. In addition to recent advances and updates relevant to the previous edition, the revised work also covers ethics in biotechnology and discusses career possibilities in this growing field.

Building Tissues

An Engineer's Guide to Regenerative Medicine

Joseph W. Freeman and Debabrata Banerjee

Series: *Biomedical Engineering*

In order to effectively replace and regenerate a tissue, engineers must be familiar with mechanics, diffusion, electrical conductivity, heat transfer, kinetics, and a host of other concepts that are frequently studied. Each of these concepts is exposed in this book through descriptive introductions followed by mathematical equations with example problems. After the concepts have been introduced, they will be applied to specific tissues and regenerative techniques. Students will be able to see how the concepts are applied differently from one tissue or structure to the next and how one concept may be more important to one tissue than it is to another.

Design of Biomedical Devices and Systems, 4th edition

Paul H. King, Vanderbilt University, Nashville, Tennessee, USA, Richard C. Fries, ISORel, Inc., Fitchburg, Wisconsin, USA and Arthur T. Johnson, North Carolina State University, USA.

This will be a substantial revision of a highly regarded text, intended for senior design capstone courses within departments of biomedical engineering, bioengineering, biological engineering and medical engineering, worldwide. Each chapter will be thoroughly updated and revised to reflect the latest developments. New material will be added on entrepreneurship, bioengineering statistics, clinical trials and CRISPR. New examples, applications and problems will be added in each chapter. There will be strong efforts made to increase the number of clinical

applications to enhance the overall relevance of the material that's presented. Significant new material added on FDA regulations.

TEXTBOOK · READER

Mechanics of Elastic Waves and Ultrasonic Nondestructive Evaluation

Tribikram Kundu, The University of Arizona, Tucson, USA

This book gives the reader the necessary mechanics background to understand and analyze elastic wave propagation in solids. This knowledge is necessary for modeling and interpreting experimental results generated by ultrasonic nondestructive evaluation (NDE) techniques. It will cover both linear and nonlinear ultrasonic NDE methods. This is important in determining internal damages in structural components, that need to be detected in a nondestructive fashion. Examples would be cracks inside various structural components related to aircraft, ships, automobiles and bridges. Knowledge contained in this book is quite useful for such damage detection applications.

Neuromuscular Fundamentals

How Our Musculature is Controlled

Nassir H. Sabah, American University of Beirut, Lebanon

The book is concerned with the operation of the neuromuscular system, which is the part of our nervous system that enables us to maintain an upright posture and allows voluntary or involuntary movement of our limbs and other body parts. The approach is essentially that of an engineering textbook, emphasizing the quantitative aspects and highlighting the fundamentals and basic concepts involved. The coverage progresses in a logical and systematic manner from the subcellular, starting with the electrophysiology of the cell membrane, then proceeding to synapses, neurons, and muscle, before considering neuronal motor ensembles and the neuromuscular system as a whole.

Aquatic Chemistry Concepts, Second Edition

James F. Pankow, Oregon Graduate Institute, Beaverton, USA

Aquatic Chemistry Concepts, Second Edition. Fully revised and updated, this textbook fills the need for a comprehensive treatment of aquatic chemistry and covers the many complicated equations and principles of aquatic chemistry. It presents the established science of equilibrium water chemistry using the uniquely recognizable, step-by-step *Pankow* format which allows a broad and deep understanding of aquatic chemistry. The text is appropriate for a wide audience that includes undergraduate and graduate students, industry professionals, consultants, and regulators.

Environmental Chemical Analysis

S. Mitra, New Jersey Institute of Technology, Newark, USA, **Pradyot Patnaik**, New Jersey Institute of Technology, Newark, USA and **B.B. Kebabekus**, New Jersey Institute of Technology, Newark, USA

Environmental Chemical Analysis provides an explanation of analytical instrumentation methods for students without a background in analytical chemistry. This second edition features expanded material on sample preparation and quality assurance and control. It also includes new chapters on biological analysis and analysis of environmental particulates. It brings together sampling, sample preparation, and analytical techniques necessary for environmental applications, demonstrated through case studies of actual environmental measurement protocols.

Introduction to Liquid Crystals

Chemistry and Physics, Second Edition

Peter J. Collings, Swarthmore College, Swarthmore, PA, USA and **John W. Goodby**, University of York, York, UK

Introduction to Liquid Crystals: Chemistry and Physics, Second Edition relies on only introductory level chemistry and physics as the foundation for understanding liquid crystal science. Liquid crystals combine the material properties of solids with the flow properties of fluids. As such they have provided the foundation for a revolution in low-power, flat-panel display technology LCDs. In this book, the essential elements of liquid crystal science are introduced and explained from the perspectives of the chemist, physicist and engineer.

Chemical Reaction Engineering and Reactor Technology, Second Edition

Tapio O. Salmi, Abo Akademi, Abo-Turku, Finland, **Jyri-Pekka Mikkola**, Abo Akademi, Abo-Turku, Finland and **Johan P. Wärnå**, Abo Akademi, Abo-Turku, Finland

Series: *Chemical Industries*

This well received textbook develops the concept of chemical reaction engineering in a systematic manner, beginning with homogeneous reactors and gradually moving toward more complicated heterogeneous systems. Reactor technology is presented in an illustrative manner with many practical and varied applications included. Numerous realistic exercises help upper undergraduate and graduate students learn the concepts presented. A modern computing approach to chemical reaction engineering is taken throughout the material. The real-life

examples make the book very attractive for a broad audience, including engineers working in chemical and process industry.

Introduction to Nuclear Science

Jeff C. Bryan, University of Wisconsin, La Crosse, USA

Written to provide students who have limited backgrounds in the physical sciences and math with an accessible textbook on nuclear science, this edition continues to provide a clear and complete introduction to nuclear chemistry and physics, from basic concepts to nuclear power and medical applications. Incorporating suggestions from adopting professors, the discussion of neutron cross sections is expanded, coverage of the nuclear fuel cycle is now included, and international terms are incorporated. This updated, expanded edition provides a much-needed textbook and resource for undergraduate students in science and engineering as well as those studying nuclear medicine and radiation therapy.

Introductory Solid State Physics with MATLAB Applications

Javier E. Hasbun and Trinanjan Datta

Solid state physics, the study and prediction of the fundamental physical properties of materials, forms the backbone of modern materials science and has many technological applications. The unique feature of this text is the MATLAB-based computational approach with several numerical techniques and simulation methods included. This is highly effective in addressing the need for visualization and a direct hands-on approach in learning the theoretical concepts of solid state physics. The code is freely available to all textbook users.

Solid State Chemistry

An Introduction

Elaine A. Moore, The Open University, Milton Keynes, UK and Lesley E. Smart, The Open University, Milton Keynes, UK

Solid State Chemistry: An Introduction presents a wide range of the synthetic and physical techniques used to prepare and characterize solids. Going beyond this, this largely nonmathematical introduction to solid state chemistry includes the bonding and electronic, magnetic, electrical and optical properties of solids. Solids of particular interest – porous solids, superconductors and nanostructures are included. Practical examples of applications and modern developments are given. It offers students the opportunity to apply their knowledge in real-life situations and serve them well throughout their degree

course.

Medicinal Chemistry

Norma K Dunlap, Middle Tennessee State University, USA and Donna M Huryn, University of Pennsylvania and University of Pittsburgh, USA

Medicinal Chemistry teaches the essential concepts of medicinal chemistry from the perspective of practicing chemists, starting with a synthetic organic chemistry and structural biology foundation and interweaving coverage of therapeutics, case studies, historical context, and modern techniques. Each chapter features a Journal Club, as well as review and application questions to enhance and test comprehension. This textbook is ideal for upper-level undergraduates and graduate students

taking a one-semester survey course on medicinal chemistry and/or drug discovery, as well as scientists entering the pharmaceutical industry.

Survival Guide to General Chemistry

Patrick E. McMahon, Benedictine University, Organic Chemistry and General Chemistry, Lisle, Illinois, USA, Rosemary McMahon and Bohdan Khomtchouk

This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific, detailed step-by-step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters

also provide alternative viewpoints as an aid to understanding.

Transport Phenomena Fundamentals

Joel L. Plawsky, Rensselaer Polytechnic Institute, Troy, New York, USA

Series: *Chemical Industries*

The Fourth edition of *Transport Phenomena Fundamentals* continues with its streamlined approach to the subject of transport phenomena, based on a unified treatment of heat, mass, and momentum transport using a balance equation approach. The new edition includes more worked examples within each chapter and adds confidence building problems at the end of each chapter. Some solutions will be included in an appendix for students to check their comprehension of key concepts. A companion website will include author videos and COMSOL®, Maple®, and MATLAB® exercises. This edition also

incorporates a wider range of problems to expand the utility of the text beyond chemical engineering.

Understanding Molecules

Lectures on Chemistry for Physicists and Engineers

Franco Battaglia and Thomas F. George, Department of Psychology, Mills College, Oakland, CA

Chemistry is a subject that many students with differing goals have to tackle. This unique general chemistry textbook is tailored to more mathematically-oriented engineering or physics students. The authors emphasize the principles underlying chemistry rather than chemistry itself and the almost encyclopedic completeness appearing in a common textbook of general chemistry is sacrificed for an emphasis to these principles. Contained within 500 pages, it is suitable for a one-semester course for students who are strong in physics and mathematics. Over 200 problems are provided to ensure understanding, and answers are provided in the text so that the

students can check their progress.

Advanced Soil Mechanics, Fifth Edition

Braja M. Das, formerly at California State University, Sacramento, USA

The fifth edition of this established textbook offers a well-tailored resource for graduate students in geotechnical engineering. It bridges the gap between undergraduate basics and leading-edge work at graduate level. New material is included on consolidation, shear strength of soils, and both elastic and consolidation settlements of shallow foundations to accommodate modern developments.

This text can be followed by advanced courses dedicated to mechanical and chemical stabilization of soils, geo-environmental engineering, critical state soil mechanics,

geosynthetics, rock mechanics, and earthquake engineering. It can also be used as a reference by practical consultants.

Advanced Automotive Fault Diagnosis

Automotive Technology: Vehicle Maintenance and Repair

Tom Denton, IMI eLearning Development Manager, UK

This provides all the skills to pass Level 3 and 4 Vehicle Diagnostic courses from IMI, City and Guilds and BTEC, as well as ASE, AUR and other higher level qualifications.

This fifth edition of *Advanced Automotive Fault Diagnosis* includes new content on diagnostic tools and equipment, with ten totally new case studies. It explains the fundamentals of vehicle systems and components and examines diagnostic principles as well as effective vehicle maintenance and repair. Diagnostics, or fault finding, is an essential part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostics skills.

Advanced Electrical Installation Work

City and Guilds Edition

Trevor Linsley, formerly a Senior Lecturer at Blackpool and the Fylde College and Head of the NVQ Assessment Centre, UK.

This new edition covers the City and Guilds 2365-03 course, updated in line with the 18th Edition of the Wiring Regulations. Written in an accessible style with a chapter dedicated to each unit of the syllabus, this book helps you to master each topic before moving on to the next. This new edition includes information on construction and demolition sites, fire proofing, energy efficiency and LED lights, as well as some updated diagrams. End of chapter revision questions help you to check

your understanding and consolidate the key concepts learned in each chapter. Full colour diagrams and extensive online material explain difficult concepts.

Analysis and Design of Geotechnical Structures

Manuel Matos Fernandes, University of Porto, Portugal

Analysis and Design of Geotechnical Structures bridges the gap between basic soil mechanics and geotechnical engineering practice to particularly suit Masters students. It presents the theory and methods underpinning geotechnical design and also serves as a manual for practitioners.

With solutions manual. Basic principles and analysis are given with design practice to Eurocode 7, with a series of topics including: overall stability of soil masses, earth pressure, spread foundations, consolidation theory and delayed settlements in clayey soils, earth-retaining walls, natural slopes, and compacted fill and earthworks. Along with geotechnical characterization, with a focus on field tests.

Alternative Fuel Vehicles

Tom Denton, IMI eLearning Development Manager, UK

Alternative Fuel Vehicles examines the ever growing demand for vehicles that operate using non-conventional fuels. This book provides an overview of alternative fuels, ideal for beginners, starting with the very basic principles of alternative fuel, before moving on to consider alternative fuel technologies, the influencing environmental factors and the future of alternative fuel. Using real-life case studies and examples, this book is an ideal companion to any unit of study on alternative fuel, but will also be of interest to working technicians and keen amateurs.

Applied Engineering Mathematics

Brian Vick, Virginia Tech, USA

Undergraduate engineering students need good mathematics skills, and this textbook supports this with a strong emphasis on visualization and the methods and tools needed across the whole of engineering.

The visual approach is emphasised, and excessive proofs and derivations are avoided. The visual images explain and teach the mathematical methods. The book's website provides dynamic and interactive codes in *Mathematica* to accompany the examples for the reader to explore on their own.

Automated Driving and Driver Assistance Systems

Tom Denton, IMI eLearning Development Manager, UK

Automated driving vehicles are undergoing serious testing around the world. This book explains the technologies straightforwardly, covering the subject from several angles but in particular showing the links to existing ADAS technologies already in use on all modern vehicles. While some manufacturers expect to have vehicles available from 2020, it will be much longer before they are commonplace. Yet it is crucial to be ready for the huge change automated driving will bring. This is the first book of its type available and complements Tom Denton's other books.

Coastal Engineering

Processes, Theory and Design Practice

Dominic Reeve, University of Swansea, UK, **Andrew Chadwick**, retired from University of Plymouth, UK and **Christopher Fleming**, Halcrow Group Ltd., Swindon, UK

Coastal Engineering is a must-have book for final year undergraduate and engineering MSc students specializing in coastal engineering and management. This third edition covers a number of developments, with updates to conceptual and detailed design; a detailed example is given for the calculation of extreme wave conditions for design; and a rethinking of coastal system behaviour in the light of NERC's iCOASST project – along with a new section on the components of surge; the method for tidal analysis and calculation of amplitudes and phases of harmonic constituents from water level time series; a worked example of harmonic analysis; and an revised section on the Tohoku tsunami.

Classical Mechanics in Geophysical Fluid Dynamics

Osamu Morita

This textbook for senior undergraduate and graduate students outlines and provides links between classical mechanics and geophysical fluid dynamics. It is particularly suitable for the mechanics and fluids dynamics courses of geophysics, meteorology, or oceanography students as well as serving as a general textbook for a course on geophysical fluid dynamics.

It describes the motions of rigid bodies and shows how classical mechanics has important applications of to geophysics, as in the precession of the earth, oceanic tide, and the retreat of the moon from the earth owing to the tidal friction.

Electrical Installation Work

Brian Scaddan

Now updated in line with the 18th Edition of the Wiring Regulations, this highly successful book provides a topic by topic progression through the areas of electrical installations, including how and why electrical installations are designed, installed and tested. Brian Scaddan's subject-led approach makes this a valuable resource for professionals and students on both City and Guilds and EAL courses.

Additional content in this edition includes detail on LED lighting and medical locations. A new appendix contains a glossary of electrical installation work terms, ensuring that readers of all

levels of experience can easily grasp every topic.

Electronic Circuits

Fundamentals and Applications

Mike Tooley

This fifth edition provides all the information required to get to grips with the fundamentals of electronics, detailing the underpinning knowledge necessary to appreciate the operation of a wide range of electronic circuits. An additional chapter shows how a wide range of useful electronic applications can be developed in conjunction with the increasingly popular Arduino microcontroller, and a new section details batteries for use in electronic equipment and some additional/updated student assignments. The book's content is matched to the latest pre-degree level courses (from Level 2 up to, and including,

Foundation Degree and HND).

Fundamentals of Convective Heat Transfer

Gautam Biswas, Department of Mechanical Engineering, Indian Institute of Technology Kanpur, India, **Amaresh Dalal** and **Vijay K. Dhir**, Mechanical and Aerospace Engineering, University of California, Los Angeles, US

Thermal convection is often encountered by the scientists and engineers while designing or analyzing flows involving exchange of energy. The book is a unified document that captures the physical insight into convective heat transfer, thorough analytical and numerical treatments. It also focusses on the latest developments in theory of convective energy and mass transport. Aimed at graduates, senior undergraduates and the engineers involved in research and development activities, it

provides new material on Boiling, including nuances of physical processes. In all the derivations, step-by-step and systematic approaches have been followed.

Principles of Structural Design

Wood, Steel, and Concrete, Third Edition

Ram S. Gupta, Roger Williams University, Bristol, Rhode Island, USA

Timber, steel, and concrete are common engineering materials used in structural design. Material choice depends upon the type of structure, availability of material, and the preference of the designer. The design practices the code requirements of each material are very different. In this updated edition, the elemental designs of individual components of each material are presented, together with theory of structures essential for the design. Numerous examples of complete structural designs have been included. A comprehensive database comprising materials properties, section properties, specifications, and

design aids, has been included to make this essential reading.

Soils and Geotechnology in Construction

Alan J. Lutenegeger, University of Massachusetts, Amherst, USA

This book covers the field of applied geotechnology related to all aspects of construction in ground, including compacted fill, excavations, ground improvement, foundations, earth retaining systems and geotechnical site characterization. It suits the first year of a graduate course on ground improvement and geoconstruction and will suit practicing engineers, both consultants and contractors. It covers the identification of problematic soils and appropriate mitigation measures, and the inspection of ground construction work. It combines the technical and the practical in applied geotechnology.

Structural Design from First Principles

Michael Byfield

This undergraduate civil engineering textbook explains structural design from its mechanical principles rather than design codes. It presents good approximate solutions to complex design problems, such as "Wembley-Arch" type structures, the design of thin-walled structures, and long-span box girder bridges. These relatively simple techniques enable quick, early stage, "ball-park" design solutions, and are also useful for checking finite element analysis solutions to complex problems. It is consistent with the Eurocodes, but with the underlying theory fully explained. Explanation is closely linked to a structured series of worked examples at the end of each section

Urban Drainage

David Butler, University of Exeter, UK, Christopher James Digman, Christos Makropoulos, National Technical University of Athens, Zografou, Greece and John W. Davies

This new edition covers the drainage of rainwater and wastewater. It deals comprehensively with the analysis and design of new systems and of existing infrastructure. Combining principles, practice and research, it provides significant new material on modelling, risk, smart urban drainage, and the global and local context. This is an essential text for undergraduate and Masters students in water engineering, environmental and public health engineering, engineering hydrology, and related disciplines. It is written in line with BS EN, WaPUG, serving as a reference for drainage design and drainage operation engineers and consulting engineers. It is illustrated with extensive examples.

Techniques for Ship Handling and Bridge Team Management

Hiroaki Kobayashi, Tokyo University of Marine Science and Technology, Japan

Taking a rigorous and scientific look at good practice and attitudes, good seamanship can be viewed as a series of concrete technical functions, which can be in terms of competencies.

By giving proper attention to human factors the conditions for maintaining system safety can be defined, and the interaction of human competencies and environmental conditions and their effects on system safety can be recognised. System safety in turn depends on good bridge team management, with particular emphasis on communication, cooperation and leadership.

Transportation Asset Management

Methodology and Applications

Zongzhi Li, Illinois Institute of Technology, Chicago, USA

Transportation asset management delivers efficient and cost-effective investment decisions to support transportation infrastructure and system usage performance measured in economic, social, health, and environmental terms. It can be applied at national, state, and local levels. This can be applied to multimodal transportation, taking account of system component interdependency, integration, and risk and uncertainty. It applies as easily to static traffic and time-dependent or dynamic traffic.

It is written for transportation planners and engineers, as well as graduate students.

3ds Max Basics for Modeling Video Game Assets: Volume 1

Model a Complete Game Environment and Export to Unity or Other Game Engines

William Culbertson

A book for learning 3d modeling fundamentals, step-by-step lessons develops the readers modeling skills through a series of modeling exercises creating modules for a medieval castle environment, calling on the reader to perform repetitive tasks. The content is presented as if the reader is in a working video game studio, being responsible for researching asset design, providing the team with placeholder assets, and final model assets that are unwrapped and custom textured. Upon completion of the modeling projects, the modeled environment is exported to the Unity game engine for use in a real game environment.

A Concise Introduction to Machine Learning

A.C. Faul, University of Cambridge, UK

Series: *Chapman & Hall/CRC Machine Learning & Pattern Recognition*

The emphasis of the book is on the question of Why – only if why an algorithm is successful is understood, can it be properly applied, and the results trusted. Algorithms are often taught side by side without showing the similarities and differences between them. This book addresses the commonalities, and aims to give a thorough and in-depth treatment and develop intuition, while remaining concise.

This useful reference should be an essential on the bookshelves of anyone employing machine learning techniques.

A Concise Introduction to Programming in Python

Mark J. Johnson, North Carolina State University, USA.

Series: *Chapman & Hall/CRC Textbooks in Computing*

A Concise Introduction to Programming in Python, Second Edition provides a hands-on and accessible introduction to writing software in Python, with no prior programming experience required. The text offers sections designed for approximately one class period each, and proceeds gradually from procedural to object-oriented design. Examples, exercises, and projects are included from diverse application domains, including finance, biology, image processing, and textual analysis. It also includes a brief "How-To" sections that introduce optional topics students may be interested in exploring. The text is written to be read, making it a good fit in flipped classrooms.

A Practical Guide to Database Design

Rex Hogan

Fully updated and expanded from the previous edition, A Practical Guide to Database Design, Second Edition, is intended for those involved in the design or development of a database system or application. It begins by focusing on how to create a logical data model where data is stored "where it belongs." Next, data usage is reviewed to transform the logical model into a physical data model that will satisfy user performance requirements. Finally, it describes how to use various software tools to create user interfaces to review and update data in a database.

Artificial Intelligence

With an Introduction to Machine Learning, Second Edition

Richard E. Neapolitan, Northeastern Illinois University, Illinois, USA and **Xia Jiang**, University of Pittsburgh, Pennsylvania, USA

Series: Chapman & Hall/CRC Artificial Intelligence and Robotics Series

The first edition of this popular textbook, *Contemporary Artificial Intelligence*, provided an accessible and student friendly introduction to AI. This fully revised and expanded update retains the same accessibility and problem-solving approach, while providing new material and methods, including neural networks and deep learning. Suitable for undergraduate and beginning graduate students, this class-tested textbook provides students

with key AI methods and algorithms for solving challenging problems involving systems that behave intelligently in specialized domains such as medical and software diagnostics, financial decision making, speech and text recognition, genetic analysis, and more.

Automata and Computability

A Programmer's Perspective

Ganesh Gopalakrishnan

This class-tested textbook provides a comprehensive and accessible introduction to the theory of automata and computation. The author uses illustrations, engaging examples, and historical remarks to make the material interesting and relevant for students. It incorporates modern/handy ideas, such as derivative-based parsing and a Lambda reducer showing the universality of Lambda calculus. The book also shows how to sculpt automata by making the regular language conversion pipeline available through a simple command interface. A Jupyter notebook will accompany the book to feature code,

YouTube videos, and other supplements to assist instructors and students.

Computer Organization

Basic Processor Structure

James Gil de Lamadrid, Bowie State University, MD, USA

This class-tested textbook is based on the author's decades of teaching the topic to both undergraduate and graduate students. The main questions the book tries to answer are: how is a processor structured, and how does the processor function, in a general-purpose computer? Focusing solely on the information that is essential to the field, this text provides fundamental concepts and examples on computer organization. Using a top-down approach, the text begins at digital circuitry level, and works up to the machine language level. Numerous architectures are also covered, including key design issues.

Exploratory Data Analysis Using R

Ronald K. Pearson, GeoVera Holdings, Inc., CA, USA

Series: Chapman & Hall/CRC Data Mining and Knowledge Discovery Series

This textbook introduces exploratory data analysis (EDA) and covers the range of interesting features we can expect to find in data. The book also explores the practical mechanics of using R to do EDA. Based on the author's course at the University of Connecticut, the book assumes no prior exposure to data analysis or programming, and is designed to be as non-mathematical as possible. Exercises are included throughout, and a Solutions Manual will be available. The author will also provide a supplemental R package through the Comprehensive R Archive

Network that will include implementations of some of the features in this book, along with data examples, tools, and datasets.

Graphic Design

Learn It, Do It

Katherine A. Hughes

This book is an introduction to the fundamentals of graphic design and the software applications used to put these concepts into practice, specifically the Adobe Creative Suite. The book is intended for production-oriented audiences, those interested in the what, why and how of graphic design. Based on the approach of learning then doing, which in this environment translates to reviewing the basics then experimenting with design within the Adobe applications. A series of discussions and open-ended activities are included at the end of each chapter intended to further the conversation and invite creative expression of design using the Adobe Creative Suite.

Teaching Computing

A Practitioner's Perspective

Henry M. Walker, Grinnell College, Iowa, USA

Teaching can be intimidating for beginning faculty. Some graduate schools and some computing faculty provide guidance and mentoring, but many do not. Often, a new faculty member is assigned to teach a course, with little guidance, input, or feedback. Based upon over 40-years of the author's teaching experience, and informed by computing-education research, this book addresses numerous components of teaching by providing a solid resource for both new and experienced computing faculty. The book serves as a practical, easy-to-use resource, covering numerous tips, techniques and perspectives in a collection of focused down-to-earth chapters.

Mastering Modern Linux

Paul S. Wang, Kent State University, OH, USA

This popular textbook has been well received in the marketplace, since its publication in 2010. The Linux system is now much more widely used and have evolved in significant ways, since the publication of the first edition. Popular Linux distributions have moved ahead and matured. New distributions, such as Mint, have become widely used. Linux is now much more GUI (graphical user interface) oriented and can compete with MS Windows and MAC OS on many levels. The book will be updated to reflect all of these recent developments and advances, while preserving the overall structure and most of the topics in the first edition.

Brian J. Wardyga

The Video Games Textbook takes the history of video games to another level, with visually-stimulating, comprehensive, and chronological chapters that are relevant and easy to read for a variety of students. Every chapter is a journey into a different era or area of gaming, where readers emerge with a strong sense of how video games evolved, why they succeeded or failed, and the impact they had on the industry and human culture. Written to capture the attention and interest of both domestic and international college students, each chapter contains a list of objectives and key terms, illustrative timelines, arcade summaries,

images and technical specifications of all major consoles.

Security for Software Engineers

James N. Helfrich, Brigham Young University, Idaho, USA

Most textbooks about Computer Security targets end-users, or CIT/IT professionals. Few if any truly target undergraduate software engineering students. This book is designed to address this shortcoming. It is divided into four units, each targeting activities that a software engineer will likely be involved in within industry. These areas are: attack vectors, code hardening, privacy, and social engineering. Each topic is explored from a theoretical and a practical-application standpoint. This text will equip students to make knowledgeable security decisions, be productive members of a security review team, and write code that protects a user's information assets.

A First Course in Predictive Control

J.A. Rossiter, University of Sheffield, UK

The book presents a significant expansion in depth and breadth of the previous edition. It includes substantially more numerical illustrations and copious supporting MATLAB code that the reader can use to replicate illustrations or build his or her own. The code is deliberately written to be as simple as possible and easy to edit. The book is an excellent starting point for any researcher to gain a solid grounding in MPC concepts and algorithms before moving into application or more advanced research topics. Sample problems for readers are embedded throughout the chapters, and in-text questions are designed for readers to demonstrate an understanding of concepts through numerical simulation.

TEXTBOOK · READER

Basic Principles of Nanotechnology

Wesley C. Sanders, Salt Lake Community College, UT, USA

The book allows the reader to have a basic understanding of the structure and properties of nanoscale materials routinely used in nanotechnology-based research and industries. To add, the book describes the operation of nanoscale transistors and the processes used to fabricate the devices. Additionally, it presents research involving the use of carbon nanotubes, graphene, and molecules to create non-silicon based electronic devices. It aims to provide an understanding of the operation of the most frequently used fabrication and characterization procedures, such as scanning electron microscopy, atomic force microscopy, etch, e-beam lithography, and photolithography.

Building Electrical Systems and Distribution Networks

An Introduction

Radian Belu, University of Alaska Anchorage, Alaska, USA

Series: Nano and Energy

This book covers all important, new and conventional aspects of building electrical systems, power distribution, lighting, transformers and rotating electric machines, wiring and building installations. Solved examples, end of chapter questions and problems, case studies, and design considerations are included in each chapter, highlighting concepts, diverse and critical features of building and industrial electrical systems. Support materials are included for interested instructors.

Classical Feedback Control with Nonlinear Multi-Loop Systems

With MATLAB® and Simulink®, Third Edition

Boris J. Lurie, California Institute of Technology, Pasadena, USA and Paul Enright, California Institute of Technology, Pasadena, USA

Series: Automation and Control Engineering

This book describes the design of high-performance feedback control systems, emphasizing the frequency-domain approach widely used in practical engineering. It presents design methods for high-order nonlinear single- and multi-loop controllers with efficient analog and digital implementations. Bode integrals are employed to estimate the available system performance and to determine the ideal frequency responses that maximize the disturbance rejection and feedback bandwidth. This book serves as a unique text for an advanced course in control system

engineering, and as a valuable reference for practicing engineers competing in today's industrial environment.

Communication Protocol Engineering

Miroslav Popovic, University of Novi Sad, Serbia

The book aims to enable the reader to master the engineering of communication protocols, which are amply present nowadays in mobile phones, tablets, laptops, smart appliances, and service providers' datacenters and clouds. Readers will acquire the theoretical knowledge and practical skills to successfully design, implement, test, and verify their solutions. The key benefits of the new edition align with the latest standard for conformance testing, TTCN-3, along with updated chapters. It explains process algebra CSP and how to model, simulate, and automatically verify CSP models in PAT.

Computational Electromagnetics with MATLAB, Fourth Edition

Matthew N.O. Sadiku, Prairie View A&M University, Texas, USA

This fourth edition of the text reflects the continuing increase in awareness and use of computational electromagnetics and incorporates advances and refinements made in recent years. Most notable among these are the improvements made to the standard algorithm for the finite-difference time-domain (FDTD) method and treatment of absorbing boundary conditions in FDTD, finite element, and transmission-line-matrix methods. It teaches the readers how to pose, numerically analyze, and solve EM problems, to give them the ability to expand their problem-solving skills using a variety of methods, and to prepare them for research in electromagnetism.

Elementary Concepts of Power Electronic Drives

K Sundareswaran, Department of Electrical and Electronics Engineering, National Institute of Technology, Trichirapalli, Tamil Nadu, INDIA

"Elementary Concepts of Power Electronic Drives" aims to facilitate a smooth transition from basic knowledge of electric machines and power electronics to the world of power electronics. This book emphasizes only on relevant principles of electric motors and power electronics and then integrates such facts to bring the principle power electronic control of electric motors. Salient features of motors and power converter operations are crisply mentioned at appropriate places. Different case studies and solved numerical examples are provided in large numbers including illustrations through commonly seen

electric drives.

Fundamental Principles of Radar

Habibur Rahman

This book provides a comprehensive set of radar principles and covers a broad spectrum of radar types. The book will help readers to become confident in first-order radar design, and fundamental technical issues. Most chapters are self-contained and can be very useful for readers seeking selective topics of study. The text includes examples and exercises to reinforce the concepts presented, and illustrates the wide range of radar applications. In addition to its use in undergraduate or junior graduate teaching, this book should find use for engineers, working in industry desiring to have first exposure to fundamental principles of radar.

Fundamentals of Electric Machines: A Primer with MATLAB

A Primer with MATLAB

Warsame Hassan Ali, Prairie View A&M University, Texas, USA, **Matthew N. O. Sadiku**, Prairie View A&M University, Texas, USA and **Samir Abood**, Prairie View A&M University, Texas, USA

An electric machine is a device that converts mechanical energy into electrical energy or vice versa. It can take the form of an electric generator, electric motor, or transformer. Electric generators produce virtually all electric power we use all over the world. Electric machine blends the three major areas of electrical engineering: power, control and power electronics. This book presents the relation of power quantities for the machine as the current, voltage power flow, power losses, and

efficiency. This book will provide a good understanding of the behavior and its drive, beginning with the study of salient features of electrical dc and ac machines.

MicroMechatronics, Second Edition

Kenji Uchino, Pennsylvania State University, USA

After Uchino's introduction of a new terminology, 'Micromechatronics' in 1979 for describing the application area of 'piezoelectric actuators', the rapid advances in semiconductor chip technology have led to a new terminology MEMS; (micro-electro-mechanical-system) or even NEMS (nano-electro-mechanicalsystem) to describe mainly thin film sensor/actuator devices, a narrower area of micromechatronics coverage. New technologies, product developments and commercialization are providing the necessity of this major revision. In particular, the progresses in high power transducers, loss mechanisms in smart materials, energy harvesting and computer simulations are significant.

Switched Reluctance Motor Drives

Fundamentals to Applications

Edited by **Berker Bilgin**, McMaster University, Hamilton, ON, Canada, **James Weisheng Jiang**, McMaster Automotive Resource Centre (MARC), Ontario, Canada and **Ali Emadi**, McMaster University, Hamilton, ON, Canada

This is a comprehensive textbook covering major aspects of switched reluctance motor drives in detail. It also provides a macroscopic view of the use of electric motors in different sectors to explore the role of SRM in industry. Utilizing higher efficiency, lower cost, and robust electric motors will increase the level of electrification in industry, improve overall system efficiency, and reduce the operational cost, the electricity

consumption, and emissions. This is where switched reluctance machine (SRM) can play a significant role. One of the main advantages of SRM is its low-cost and simple construction, which can provide reliable operation in a harsh environment.

Quantum Mechanics

A Simplified Approach

Shabnam Siddiqui

Readers are introduced to the early ideas and experiments that lead to the theory of quantum mechanics in the first two chapters. Every chapter presents quantum ideas in a structured way, with a comparison between quantum and classical concepts. Simulations are provided to aid in the visualization of the quantum phenomenon, and for a meaningful understanding of mathematics. This approach may lead to development of "quantum mechanical intuition", as well as learning mathematical techniques for problem solving. Most importantly, the book is not flooded with numerous topics that makes the reader confused and distracted, rather most important topics are

discussed at a more deeper level.

Air Pollution Control Engineering for Environmental Engineers

Edited by Jeff Kuo, California State University, Fullerton, USA
Series: Fundamentals of Environmental Engineering

Air pollution control and air quality engineering are some of the key subjects in any environmental engineering curriculum. This book will cover topics that are fundamental to pollution control engineers and professionals, including air pollution and its management through regulatory approaches, calculating and estimating emissions, and applying control technologies for different forms of pollutants and emission characteristics for several key industries. In addition, it will include topics that address issues such as fugitive component leak detection and repair, odor containment and control, greenhouse gas emissions, and indoor air pollution, which are often not found in other

similar books.

Fundamentals of Satellite Remote Sensing

An Environmental Approach, Third Edition

Emilio Chuvieco, Universidad de Alcalá, Alcalá de Henares, Spain

This third edition covers the most recent advances since the publication of the previous book, relating to the acquisition and interpretation of remotely-sensed data. It includes updated EO missions, such as third generations of geostationary meteorological satellites, the new polar orbiting platforms (Suomi), the ESA Sentinels program, and high-resolution commercial systems. Low-altitude sensing systems and improved coverage of digital techniques used to extract environmental information from remote sensing will be included as well; particularly, new machine learning classification techniques. Extended coverage of radar and LIDAR processing methods will also be included.

GIS

An Introduction to Mapping Technologies

Patrick McHaffie, Sungsoon Hwang, DePaul University, Chicago and Cassie Follett, DePaul University, Chicago

The purpose of this textbook is to provide an accessible introduction to geotechnology for a wide range of students. The techniques and approaches to problem solving, project organization and management, and data visualization are used with the intension of introducing students to the possibility of using GIS as a platform for making contributions to a wide range of programs that are concerned with social, economic, political, and environmental change. Includes activities that lead students through hands-on workflows to create flexible and functional "solutions" to specific tasks that are typical for geospatial analysts.

Image Analysis, Classification and Change Detection in Remote Sensing

With Algorithms for Python, Fourth Edition

Morton John Canty, Juelich Research Center, Germany

This fourth edition is focused on the development and implementation of statistically motivated, data-driven techniques through a tight interweaving of statistical and machine learning theory with algorithms and computer codes. The material is self-contained and illustrated with many programming examples. New in the fourth edition is an in-depth treatment of a recent Wishart distribution-based sequential change detection algorithm for polarimetric SAR image time series, as well as an introduction to deep learning in the context of supervised land-use classification. It includes Python (open source) versions of all of the main image analysis algorithms making it accessible to all readers.

Introduction to Renewable Power Systems and the Environment with R

Miguel F. Acevedo, University of North Texas Department of Geography, Denton, TX

This textbook introduces the fundamentals of renewable electrical power systems examining their direct relationships with the environment. It covers conventional power systems and opportunities for increased efficiencies and friendlier environmental interactions. While presenting state-of-the-art technology, the author uses a practical interdisciplinary approach explaining electrical, thermodynamics, and environmental topics within every chapter. This approach allows students to feel comfortable moving across these disciplines. The added value are the examples of software programs using open source

systems which serve as learning tools for the concepts and techniques described in the book.

Living with the Earth, Fourth Edition

Concepts in Environmental Health Science

Gary S. Moore, Emeritus Prof. University of Massachusetts, MA, U.S.A. and Kathleen A. Bell

This fully-updated new edition incorporates both the common concepts associated with environmental health along with new, emerging, and controversial issues associated with environmental threats to human health. Emphasis is placed on biological, chemical, and physical sources of pollution, and the methods of controlling or limiting those exposures. Careful attention is paid to presenting a balanced view representing opposing scientific views on major issues ranging from "The Greenhouse Effect" to reproductive problems associated with endocrine disruptors. A companion website supplements the material with full-color figures, continuously updated breaking

information, useful links, and more.

Modern Fluid Dynamics

Clement Kleinstreuer

Modern Fluid Dynamics, Second Edition provides up-to-date coverage of intermediate and advanced fluids topics. The text emphasizes fundamentals and applications, supported by worked examples and case studies. Scale analysis, non-Newtonian fluid flow, surface coating, convection heat transfer, lubrication, fluid-particle dynamics, microfluidics, entropy generation, and fluid-structure interactions are among the topics covered. Part A presents fluids principles, and prepares readers for the applications of fluid dynamics covered in Part B, which includes computer simulations and project writing. A review of the engineering math needed for fluid dynamics is included in an appendix.

Nuclear Reactor Thermal Hydraulics

An Introduction to Nuclear Heat Transfer and Fluid Flow

Robert E. Masterson, Virginia Polytechnic and State University, Blacksburg, USA

Nuclear Thermal-Hydraulic Systems provides a comprehensive approach to nuclear reactor thermal-hydraulics, reflecting the latest technologies, reactor designs, and safety considerations. The text makes extensive use of color images, internet links, computer graphics, and other innovative techniques to explore nuclear power plant design and operation. Key fluid mechanics, heat transfer, and nuclear engineering concepts are carefully explained, and supported with worked examples, tables, and graphics. Intended for use in one or two semester courses, the

text is suitable for both undergraduate and graduate students. A complete Solutions Manual is available for professors.

Principles of Environmental Thermodynamics and Kinetics

Kalliat T. Valsaraj, Louisiana State University, Baton Rouge, Louisiana, USA and Elizabeth M. Melvin

This book is about applications of chemical thermodynamics and kinetics to various environmental problems related to air, water, soil, and biota. The new edition contains substantial updates and a new table of contents. The applications are new and extended to include current events in environmentally-based challenges. Demonstrates the theoretical foundations of chemical property estimations for environmental process modeling. Provides a thorough understanding of applications and limitations of various property correlations. It adopts a multimedia approach to fate and transport modeling and pollution control design options. Includes numerous worked-out examples and hundreds of problems.

Principles of Stormwater Management

Roger D. Griffin, Griffin Environmental International, Irvine, California, USA

This book presents all aspects of storm water management: the hydrologic cycle, sources of contaminants, standards applicable to discharges, regulatory issues, atmospheric deposition, best management practices, and health/environmental impacts. It includes technical details of the modern treatment of stormwater, the emerging issues of atmospheric deposition, run-on, and snow melt, the Epidemiologic Model, and field data on discharge concentrations of a variety of contaminants. The principles explained in this book will enable students, contractors, developers, and engineers to grasp the most important field elements which must be included for construction projects impacting stormwater.

Wind Energy: Renewable Energy and the Environment

Vaughn Nelson, West Texas A&M University, Canyon, USA and Kenneth Starcher, West Texas A&M University, Canyon, USA

Series: *Energy and the Environment*

This book explores the wind industry from its inception in the 1970s to today; presents the design, aerodynamics, operation, control, applications, and different types of wind turbines; and provides ample reasons to shift from fossil fuels to renewable energy. It also discusses the political and economic factors regarding the adoption of wind as an energy source. It covers the characteristics of wind, such as shear, power potential, and turbulence, and discusses the measurement and siting of individual wind turbines and wind farms. This new edition is fully updated throughout, and adds new material on wind forecasting, offshore wind, decommissioning and repowering wind farms, and more.

Sustainability and Design Ethics, Second Edition

Jean Russ, College of Southern Maryland

Since the first edition, there has been a significant shift across the economy in terms of recognizing the importance of sustainability. This shift is discussed in the second edition through a substantial revision of all the chapters and the addition of a new chapter on business principles, practices, and sustainability. This book unveils a broad understanding of the theories and practices of ethical reasoning- from the general introduction to the more sophisticated theories, followed by the practices of design professionals and organizations that embody these theories, and, the detailed measures and actions to achieve future sustainability.

Turbomachinery

Concepts, Applications, and Design

V. Dakshina Murty

Turbomachinery: Concepts, Applications, and Design is an introductory turbomachinery textbook aimed at seniors and first year graduate students, giving balanced treatment of both the concepts and design aspects of turbomachinery, based on sound analysis and a strong theoretical foundation. The text has three sections, Basic Concepts, Incompressible Fluid Machines; and Compressible Fluid Machines. Emphasis is on straightforward presentation of key concepts and applications, with numerous examples and problems that clearly link theory and practice over a wide range of engineering areas. Problem solutions and figure slides are available for instructors adopting the text for their classes.

Engineering Economics of Life Cycle Cost Analysis

John Vail Farr and Isaac Faber

Engineering has changed dramatically in the last century. With modern computing systems, instantaneous communication, and extremely efficient supply chains has dramatically affected the responsibilities of engineers at all levels. The future will require systems that are more complex. Employees at all levels need to be able to develop accurate cost estimates based upon defensible cost analysis. It is under this backdrop that this book is being written. By presenting the methods, processes, and tools needed to conduct cost analysis, estimation, and management of complex systems, this textbook is the next step beyond basic engineering economics.

Food Safety and Inspection

An Introduction

Madeleine Smith

Food Safety and Inspection: An Introduction focuses on food categories and describes common hazards associated with each, using published peer-reviewed research to explain and evaluate the health risk. It is a practical textbook designed to support the role of food inspection in a modern food industry. There are seven chapters looking at specific aspects of food safety, including a chapter on spoilage and another on fraud and adulteration.

Project Management Tools and Techniques

A Practical Guide, Second Edition

Deborah Sater Carstens and Gary L. Richardson, University of Houston, Texas, USA

The topic of project management is truly an art seeking science involving the balancing of project objectives against restraints of time, budget, and quality. Achieving this balance requires skill, experience, and many tools, and techniques which are the focus of this textbook. This new edition provides updated content to incorporate examples from Microsoft Project 2016 and material from the Project Management Body of Knowledge Guide (PMBOK), sixth edition. It includes step-by-step instructions on how software tools can be used to assist project managers. The book incorporates lab assignments and cases for hands-on-experiences in using project management techniques

and tools.

Cooking as a Chemical Reaction

Culinary Science with Experiments

Z. Sibel Ozilgen, Yeditepe University, Istanbul, Turkey

Written at the undergraduate level, *Cooking as a Chemical Reaction: Culinary Science with Experiments*, Second Edition provides experiments for students in culinary arts, nutrition, dietetics, food science and technology, and gastronomy programs. The text uses experiments and experiences from the kitchen, and other food preparation areas, rather than theory, as the basic means of explaining the scientific facts and principles behind food preparation and processing. Using the book, students first perform certain experiments and record their observations in tables provided in the book. The second edition features new chapters on food hygiene and safety, kitchen terminology, and taste pairing.

Nutrition

Maintaining and Improving Health

Geoffrey P. Webb, University of East London, UK

This book contains in-depth and critical reviews of the methods used to evaluate nutritional intakes/status and the observational and experimental used to investigate putative links between dietary factors and health outcome. It covers the role of food as a source of energy and nutrients while discussing the non-nutritional roles of food and the social and psychological factors that influence food choice. Presenting a critical discussion on the value of nutrition research linking specific foods or nutrients to specific diseases encourages students to question the value of some current nutrition research.

A Hands-On Introduction to Forensic Science

Cracking the Case, Second Edition

Mark M. Okuda, Evergreen Valley College, San Jose, California, USA and Frank H. Stephenson, PhD., Thermo Fisher Scientific, Carlsbad, California, USA

A Hands-On Introduction to Forensic Science, Second Edition continues in the tradition of the first edition taking a wholly unique approach to teaching forensic science. Each chapter begins with a brief, fictional narrative that runs through the entire book; it is a crime fiction narrative that describes the interaction of a veteran homicide detective teamed with a criminalist and the journey they take together to solve a missing persons case. Step-by-step the book progressive reveals pieces

of information about the crime, followed by the more traditional presentation of scientific principles and concepts on a given forensic topics.

Intelligence Analysis Fundamentals

Godfrey Garner and Patrick McGlynn

Intelligence Analysis Fundamentals provides an introductory study of intelligence gathering and analysis, serving as an accessible text for college level undergraduate and graduate level courses. The textbook encapsulates and simplifies the intelligence cycle providing an elementary explanation of the process of gathering, analyzing and appropriate distribution of intelligence, using practical examples and scenarios drawn from criminal, military, and terror-based circumstances. Coverage is general enough in nature that a lay student—interested in pursuing a career in intelligence, Homeland Security, or other related areas of law enforcement—will benefit from it.

Introduction to Forensic Chemistry

Kelly M. Elkins, Towson University, Chemistry Department, Maryland, USA

Introduction to Forensic Chemistry is the perfect balance of testing methods and application. Coverage is neither too simplistic, nor overly advanced, making the book ideal for use in both undergraduate and graduate courses. It introduces chemical tests, spectroscopy, advanced spectroscopy, and chromatography to students. The second half addresses applications and methods to analyze and interpret controlled substances, trace evidence, questioned documents, firearms, explosives, environmental contaminants, toxins, and other topics.

The book looks at innovations in the field over time including the latest development of new discernible chemical reactions, instrumental tools, methods, and more.

Introduction to Forensic Science and Criminalistics, Second Edition

Howard A. Harris, University of New Haven, West Haven, Connecticut, USA and Henry C. Lee, University of New Haven, Henry C. Lee Institute of Forensic Science, West Haven, Connecticut, USA

This Second Edition of *Introduction to Forensic Science and Criminalistics* presents the practice of forensic science from a broad viewpoint. The Second Edition is fully updated to cover the latest scientific methods of evidence collection, evidence analytic techniques, and the application of the analysis results to an investigation and use in court. This includes coverage of physical evidence, evidence collection, crime scene processing,

pattern evidence, fingerprint evidence, questioned documents, DNA and biological evidence, drug evidence, toolmarks and firearms, arson and explosives, chemical testing, and a new chapter of computer and digital forensic evidence.

Practical Crime Scene Processing and Investigation, Third Edition

Ross M. Gardner, former felony criminal investigator at the U.S. Army Criminal Investigation Command, Georgia, USA and Donna Krouskup

Series: *Practical Aspects of Criminal and Forensic Investigations*

Practical Crime Scene Processing and Investigation, Third Edition is a basic technical reference for those learning or engaged in crime scene investigation. It remains a standard reference due to the "practical" nature of the book. It describes in depth procedures, explaining not just why such activity is required, but a practical how—to approach for accomplishing those activities. These procedures are validated through field trial and

are adjusted to the changing legal and scientific environment that crime scene investigators encounter.

Private Security and the Investigative Process, Fourth Edition

Charles P. Nemeth

Private Security and the Investigative Process, Fourth Edition is fully updated to provide complete coverage of the investigative process for private investigators and thus in corporate security environments. This edition covers emerging technology, updated legal considerations, and new information in case evaluation. The book is a useful reference for both students and professionals as to investigative practice most relevant to the private security industry—laying out not only the essentials of conducting investigations, but also providing an overview of the private security industry overall.

Scientific Protocols for Fire Investigation, Third Edition

John J. Lentini, Scientific Fire Analysis, LLC, Big Pine Key, Florida, USA

Series: Protocols in Forensic Science

Scientific Protocols for Fire Investigation, Third Edition focuses on the practical application of fundamental scientific principles to determine the causes of fires. Since the publication of the first edition 2006, the book has been updated extensively to reflect the rapidly evolving best-practices in the field—driven by new discoveries about fire behavior. Fire investigators, insurance adjusters, lawyers, forensic chemists, and fire/life safety

professionals will find this a timely and invaluable resource.

TEXTBOOK

Bacterial Genetics and Genomics

Lori A.S. Snyder

Our understanding of bacterial genetics has progressed as the genomics field has advanced. Genetics and genomics complement and influence each other; they are inseparable. Under the novel insights from genetics and genomics, once-believed borders in biology start to fade: biological knowledge of the bacterial world is being viewed under a new light and concepts are being redefined. This text assumes readers have some knowledge of genetics and microbiology but acknowledges that it can be varied. Therefore, the book includes all of the information that readers need to know in order to

understand the more advanced material in the book.

DNA Repair and Replication

Mechanisms and Clinical Significance

Edited by **Roger J. A. Grand**, University of Birmingham, UK and **John J. Reynolds**, Institute of Cancer and Genomic Sciences, College of Medical and Dental Sciences, University of Birmingham, Edgbaston, Birmingham, UK

DNA Repair and Replication brings together contributions from active researchers. The first part of this book covers most aspects of the DNA damage response, emphasizing the relationship to replication stress. The second part concentrates on the relevance of this to human disease, with particular focus on both the causes and treatments which make use of DNA Damage Repair (DDR) pathways.

2nd Edition - TEXTBOOK

Biology of Aging

Roger B. McDonald, University of California at Davis, USA

Biology of Aging, Second Edition revises and updated the original text to reflect the new approach to aging research that has had a significant impact on how disciplines such as gerontology and geriatrics view the aging process. The rate of aging and the incidence of disease are now considered highly modifiable, especially as biogerontologists and geriatricians are now accepting that time-related functional loss and disease are more closely related to environmental factors than to an intrinsic process. This book discusses the science behind the discovery that the rate of aging can be slowed and that many diseases can be prevented.

Marine Microbiology

Ecology & Applications

Colin B. Munn

The third edition of this bestselling text has been rigorously updated to reflect major new discoveries and concepts since 2011, especially progress due to extensive application of high-throughput sequencing, single cell genomics and analysis of large datasets. Significant advances in understanding the diversity and evolution of bacteria, archaea, fungi, protists, and viruses are discussed and their importance in marine processes is explored in detail. A Companion Website provides extra resources to aid teaching and learning.

Political Agroecology

Advancing the Transition to Sustainable Food Systems

Manuel González de Molina, Universidad Pablo de Olavide, Seville, Spain, **Paulo Frederico Petersen**, AS-PTA - Agricultura Familiar e Agroecologia, Rio de Janeiro, Brazil, **Francisco Garrido Peña**, Universidad de Jaen, Jaen, Spain and **Francisco Roberto Caporal**, Universidade Federal Rural de Pernambuco, Recife, Pernambuco, Brazil

Series: Advances in Agroecology

Political Agroecology is the first book to offer a systematic and articulated reflection on Political Agroecology from the Agroecological perspective. It defines the disciplinary field responsible for designing and producing actions, institutions and regulations aimed at achieving agrarian sustainability. In

short, it aims to build a political theory that makes the scaling-up of agroecological experiences possible, turning them into the foundation of a new and alternative food regime.

Sustainable Land Sector Development in Northern Australia

Indigenous rights, aspirations, and cultural responsibilities

Edited by **Jeremy Russell-Smith**, Darwin Centre for Bushfire Research, Charles Darwin University, Darwin, Northern Territory, Australia, **Glenn James**, North Australian Indigenous Land and Sea Management Alliance Ltd., Brinkin, Northern Territory, Australia, **Howard Pedersen** and **Kamaljit K. Sangha**, Darwin Centre for Bushfire Research, Charles Darwin University, Darwin, Northern Territory, Australia

This book sets out a vision for developing North Australia based on a culturally appropriate and ecologically sustainable land sector economy. This vision supports both Indigenous responsibilities and community aspirations, as well as enhancing enterprise opportunities for society as a whole. In the past,

well-meaning if often misguided policy agendas have failed - and continue to fail - Indigenous people living in remoter regions. This book will help breach that gap by acknowledging and harnessing Indigenous cultural strengths and knowledge systems for looking after the country and its people as part of a smart, novel and diversified ecosystem services economy.

TEXTBOOK

The Human Genome in Health and Disease

A Story of Four Letters

Tore Samuelsson, University of Gothenburg, Sweden

The Human Genome in Health and Disease examines the human genome, a linear sequence of roughly 3 billion bases. The intimate link between this information and biological function is systematically explored and is illustrated with inherited disorders and cancer. A range of sequence-based functional units of the human genome are thereby covered.

The book is motivated by the wealth of human sequence data currently accumulating and aids in understanding this information. It also discusses significant medical applications of human genome sequencing and genetic variation, such as the

identification of causative variants in rare genetic disorders and a variety of current methods in gene therapy.

Veterinary Clinical Epidemiology

From Patient to Population

**Ronald D. Smith**, University of Illinois College of Veterinary Medicine, Urbana, USA

Ideal for veterinary students, residents and clinicians, the fourth edition of this bestselling textbook has been fully updated in line with developments in research and teaching. The logical chapter progression reflects the stages in a clinical case work-up and how epidemiological concepts and methods contribute. This new edition includes self-evaluation questions based on edited clinical research abstracts of online full-text reports, providing a template for student evaluation. The updated book includes guidelines for improving patient and population health outcomes, and detecting emerging diseases through systematic

evaluation of patient encounters and electronic medical records.

Unifying Microbial Mechanisms

Shared Strategies of Pathogenesis

**Michael F. Cole**

Microbial pathogenesis is the study of the mechanisms by which microbes cause infectious disease and make their hosts (humans) ill. Bacterial infections thought to be easily treatable are again a huge cause for concern with the rise of antibiotic resistance.

There are very few effective antiviral drugs threatening epidemics such as bird flu and the outbreaks of viruses such the recent (and ongoing) Ebola crisis. Parasitic diseases continue to pose a heavy burden in the developing world and with climate change could spread into the developed world. There is therefore an urgent need to understand microbial mechanisms, with research programmes and university courses dedicated to

Chemical Thermodynamics

Theory and Applications

W.J. Rankin

This book develops the theory of chemical thermodynamics from first principles, demonstrates its relevance across scientific and engineering disciplines, and shows how thermodynamics can be used as a practical tool for understanding natural phenomenon and developing and improving technologies and products.

The book provides the necessary foundations for the intelligent use of thermodynamic software packages. Another unique aspect is the inclusion of three applications chapters: heat and energy aspects of processing; the thermodynamics of metal production and recycling; and applications of electrochemistry.

Fundamentals of Polymer Engineering, Third Edition

Anil Kumar and Rakesh K. Gupta

This textbook for a first course on polymers assumes some familiarity with thermodynamics and transport phenomena. It covers physical and chemical aspects and the concept of property being determined by structure. It discusses polymer synthesis, associated kinetics and molecular weights and uses this information for reactor design. It covers emulsion polymerization, polymer characterization and thermodynamics, and behavior of polymers as melts, solutions and solids. It examines crystallization, diffusion of and through polymers, polymer processing, and introduces new information on polyolefin technology, biobased plastics, and post-consumer plastic recycling. Chapters updated throughout.

Fundamentals and Operations in Food Process Engineering

Susanta Kumar Das, Indian Institute of Technology, Kharagpur, India and Madhusweta Das, Indian Institute of Technology, Kharagpur, India

'Fundamentals and Operations in Food Process Engineering' deals with basic engineering principles and transport processes applied to food processing, followed by specific unit operations with large number of worked out examples and problems for practice in each chapter. This book is divided into four sections namely, fundamentals in food process engineering, mechanical operations in food processing, thermal operations in food processing and mass transfer operations in food processing. This volume aims at students pursuing courses on food science and

food technology including broader section of scientific personnel working in food processing and related industries.

Introduction to Process Control

Jose A. Romagnoli, Louisiana State University, Baton Rouge and Ahmet Palazoglu, University of California, Davis, USA

Series: Chemical Industries

The new edition blends conventional topics with a modern perspective of integrated process operation, control, and information systems. Updated throughout, it addresses smart manufacturing, new data preprocessing techniques, and machine learning and artificial intelligence concepts. It guides the reader to resources needed to solve modeling, classification, and monitoring problems. It introduces the link between process optimization and process control and links discussion of modern architectures of industrial computer control systems with real case studies and applications to pilot-scale operations. It features exercises throughout and downloadable MATLAB toolboxes to reinforce learning.

Fundamentals of Natural Gas Processing, Third Edition

Arthur J. Kidnay, Colorado School of Mines, Golden, USA, William R. Parrish, ConocoPhillips (Retired), Brigantine, New Jersey, USA and Daniel G. McCartney, Black & Veatch, Overland Park, Kansas, USA

Offering indispensable insight from experts in the field, this book provides an introduction to the gas industry and the processes required to convert wellhead gas into valuable natural gas and hydrocarbon liquids products including LNG. The authors compile information from the literature, meeting proceedings, short courses, and their own work experiences to give an accurate picture of where gas processing technology stands today as well as to highlight relatively new technologies. Aimed at students as well as natural gas processing professionals, this

edition includes discussion questions and exercises designed to reinforce important concepts.

Modeling and Simulation of Chemical Process Systems

Nayef Ghasem, United Arab Emirates University, Al-Ain

The textbook teaches readers how to model and simulate a unit process operation through developing mathematical model equations, solving model equations manually, and comparing results with efficient software. The book covers both lumped parameter systems and distributed parameter systems and uses MATLAB and Simulink to solve the system model equations for lumped parameter systems and for distributed parameter systems generated simplified partial differential equations are solved using COMSOL, an effective tool to solve PDE using fine element method. The book includes end of chapter problems and worked examples and summarizes reader goals at start of every chapter.

Physical Properties of Materials, Third Edition

Mary Anne White, Dalhousie University, Halifax, Nova Scotia, Canada

The book focuses on the optical, thermal, electrical, magnetic and mechanical properties of materials. It introduces various materials via their properties and application of materials through tutorials via a companion website. In comparison with other textbooks it has broader coverage of physical properties and deep connections concerning the relationship between structure and origins of the properties. New topics include reference to the latest research topics in materials science and engineering, including boron nitride nanotubes, new cloaking technologies, new energy storage materials, and materials for renewable energy capture. It now features a glossary at the end of the book.

Separation Process Essentials

Alan M. Lane, The University of Alabama

Separation Process Essentials provides an interactive approach for students to learn the main separation processes (distillation, absorption, stripping, and solvent extraction) using material and energy balances with equilibrium relationships, while referring readers to other more complete works when needed. Membrane separations are included as an example of non-equilibrium processes.

This book is aimed at second and third year undergraduate students in Chemical engineering, as well as professionals in the field of Chemical engineering, and can be used for a one semester course in separation processes and unit operations.

A First Course In Chaotic Dynamical Systems

Theory And Experiment

Robert L. Devaney

The first text to introduce modern topics in dynamical systems at the undergraduate level, the book integrates both theory and computer experiments into its coverage of contemporary ideas. A classic, it offers a gradual introduction to the basic mathematical ideas behind such topics as chaos, fractals, Newton's method, symbolic dynamics, the Julia set, and the Mandelbrot set. It includes biographies of some of the leading researchers in the field. The new edition offers a heavily revised chapter on chaos and an emphasis on encouraging student research and experiment. The book is accessible to readers with only a background in calculus. Many new examples and exercises and updated references.

Additive Combinatorics

A Menu of Research Problems

Bela Bajnok, Gettysburg College, USA

Series: *Discrete Mathematics and Its Applications*

Additive Combinatorics: A Menu of Research Problems is the first book of its kind to provide readers with an opportunity to actively explore the relatively new field of additive combinatorics. The author has written the book specifically for students of any background and proficiency level, from beginners to advanced researchers. It features an extensive menu of research projects that are challenging and engaging at many different levels. The questions are new and unsolved, incrementally attainable, and designed to be approachable with various methods.

A First Course in Logic

Mark Verus Lawson

A First Course in Logic is an introduction to first-order logic suitable for first and second year mathematicians and computer scientists. There are three components to this course: propositional logic; Boolean algebras; and predicate/first-order, logic. Logic is the basis of proofs in mathematics — how do we know what we say is true? — and also of computer science — how do I know this program will do what I think it will?

A Transition to Proof

An Introduction to Advanced Mathematics

Neil R. Nicholson

Series: *Textbooks in Mathematics*

A Transition to Proof: An Introduction to Advanced Mathematics describes writing proofs as a creative process. There is a lot that goes into creating a mathematical proof before writing it. Ample discussion of how to figure out the "nuts and bolts" of the proof takes place: thought processes, scratch work and ways to attack problems. Readers will learn not just how to write mathematics but also how to do mathematics. They will then learn to communicate mathematics effectively.

An Introduction to Mathematical Proofs

Nicholas A. Loehr, Virginia Tech, Virginia, USA

Series: *Textbooks in Mathematics*

The text contains an introduction to mathematical proofs, constituting the standard core material in a course for mathematics majors. The book is divided into approximately fifty brief lectures. Each lecture corresponds to a single class meeting. The lecture format has several advantages. New material is presented in smaller chunks that are easier to digest in a single reading or class meeting. The book retains the conversational style of a lecture, while maintaining the level of precision and rigor. Every lecture ends with a review of the main points, and review lectures give summaries of each major section.

Heavy emphasis is placed on proof templates, proof outlines for complex statements.

Computer Algebra

Concepts and Techniques

Edmund A. Lamagna

The goal of *Computer Algebra: Concepts and Techniques* is to demystify computer algebra systems for a wide audience, including students, faculty, and professionals in scientific fields such as computer science, mathematics, engineering, and physics. Unlike previous books, the only prerequisites are knowledge of first year calculus and a little programming experience — a background that can be assumed of the intended audience. The book is written in a lean and lively style, with numerous examples to illustrate the issues and techniques discussed. It presents the principal algorithms and data structures, while also discussing the inherent and practical limitations of these systems.

Differential Equations

A Modern Approach with Wavelets

Steven Krantz

Series: *Textbooks in Mathematics*

This new book from one of the most published authors in all of mathematics is an attempt to offer a new, more modern take on the Differential Equations course. Because of the theory of wavelets, Fourier analysis is ever more important and central. And applications are a driving force behind much of mathematics. This text presents a more balanced picture. It covers differential equations (both ordinary and partial), Fourier analysis and applications in equal measure and with equal weight. The Riemann integral is used throughout.

Differential Geometry of Manifolds

Stephen Lovett, Wheaton College, Illinois, USA

Series: *Textbooks in Mathematics*

The Second Edition presents the extension of differential geometry from curves and surfaces to manifolds in general. The book provides a broad introduction to the field of differentiable and Riemannian manifolds, tying together classical and modern formulations. The goal is to introduce manifolds in a both streamlined and mathematically rigorous way while keeping a view toward applications, particularly in physics.

Elementary Introduction to the Lebesgue Integral

Steven G. Krantz, Washington University, St. Louis, Missouri, USA

Series: *Textbooks in Mathematics*

It is important and useful to have a text on the Lebesgue theory that is accessible to bright undergraduates. This is such a text. Going back to the days of Isaac Newton and Gottfried Wilhelm von Leibniz, and even to Newton's teacher Isaac Barrow, the integral has been a mainstay of mathematical analysis. The integral is a device for amalgamating information. It is a powerful and irreplaceable tool. The text concentrates on the real line. The student will be familiar with the real numbers and will be comfortable internalizing the new ideas of measure theory in that context. In addition to having copious examples and

numerous figures, this book includes a Table of Notation and a Glossary.

Discrete Mathematics with Ducks

sarah-marie belcastro, Smith College, Northampton, Massachusetts, USA

Discrete Mathematics with Ducks is a gentle introduction for students who find the proofs and abstractions of mathematics challenging. At the same time, it provides stimulating material, which instructors can use for more advanced students. The first edition was widely well received with its amusing writing style, and numerous exercises and materials that engaged students at all levels.

The new, expanded edition continues to facilitate effective and active learning. It is designed to help students learn about

discrete mathematics through problem-based activities. These are created to inspire students to understand mathematics by actively practicing and doing.

Exploring Linear Algebra

Labs and Projects with MATLAB®

Crista Arangala, Elon University, North Carolina, USA
 Series: *Textbooks in Mathematics*

This text is meant to be a hands-on lab manual that can be used in class everyday to guide the exploration of the theory and applications of linear algebra. For the most part, labs can be used individually or in a sequence. Each lab consists of and explanation of material with integrated exercises. Some labs are split into multiple subsections and thus exercises are separated by those subsections. The exercise sections integrate problems using Mathematica demonstrations (an online tool that can be used with a browser with java capabilities) and Matlab coding. This allows students to discover the theory and applications of linear algebra in a meaningful and memorable way

Financial Mathematics For Actuarial Science

The Theory of Interest

Richard James Wilders, North Central College, Naperville, USA

Financial Mathematics for Actuarial Science: The Theory of Interest is concerned with the measurement of interest and the various ways interest affects what is often called the time value of money (TVM). Interest is most simply defined as the compensation that a borrower pays to a lender for the use of capital. The goal of this book is to provide the mathematical understandings of interest and the time value of money needed to succeed on the actuarial examination covering interest theory.

Fundamentals of Linear Algebra

J.S. Chahal, Brigham Young University

Series: *Textbooks in Mathematics*

Fundamentals of Linear Algebra is like no other book on the subject. By following a natural and unified approach to the subject it has, in less than 250 pages, achieved a more complete coverage of the subject than books with more than twice as many pages. For example, the textbooks in use in the United States prove the existence of a basis only for finite dimensional vector spaces. This book proves it for any given vector space.

With his experience in algebraic geometry and commutative algebra, the author defines the dimension of a vector space as its Krull dimension. By doing so, most of the facts about bases when the dimension is finite, are trivial consequences of this

definition.

Game Theory

A Modeling Approach

Richard Alan Gillman, Valparaiso University, Indiana, USA and **David Housman**, Goshen College, IN

Series: *Textbooks in Mathematics*

This is an introductory game theory book that quickly moves readers through the fundamental ideas of game theory to enable them to engage in creative modeling projects based on game theoretic concepts. The book is linear, as the chapters are not independent. Readers should be able to build simple game theoretic models after chapter 3. Each subsequent chapter adds another feature to the reader's model-building repertoire.

Lessons in Play

An Introduction to Combinatorial Game Theory, Second Edition

Michael H. Albert, University of Otago, Dunedin, New Zealand, Richard J. Nowakowski, Dalhousie University, Halifax, Canada and David Wolfe

A thorough revision of a popular text in combinatorial game theory, this second edition reorganizes presentation to make it more widely accessible. The beginning focuses less on technical and more on conceptual material and applications. Still written in a textbook style with supporting evidence and proofs, the authors add many more exercises and examples and implement a two-step approach for some aspects of the material involving an initial introduction, examples, and basic results to be followed later by more technical and abstract results.

Linear Methods

A General Education Course

David Hecker and Stephen Andrilli, La Salle University

Series: *Textbooks in Mathematics*

Linear Methods: A General Education Course is expressly written for non-mathematical students, particularly freshmen taking a required core mathematics course. Rather than covering a hodgepodge of different topics as is typical for a core mathematics course, this text encourages students to explore one particular branch of mathematics, elementary linear algebra, in some depth. The material is presented in an accessible manner, as opposed to a traditional overly rigorous approach. While introducing students to useful topics in linear algebra, the book also includes a gentle introduction to more abstract facets of the subject.

Mathematical Modeling with Excel

Brian Albright, Concordia University and **William P. Fox**, U.S. Naval Post Graduate School

Series: *Textbooks in Mathematics*

This text presents a wide variety of common types of models found in other mathematical modeling texts, as well as some new types. However, the models are presented in a very unique format. A typical section begins with a general description of the scenario being modeled. The model is then built using the appropriate mathematical tools. Then it is implemented and analyzed in Excel via step-by-step instructions. In the exercises, we ask students to modify or refine the existing model, analyze it further, or adapt it to similar scenarios.

Partial Differential Equations for Mathematical Physicists

Bijan Kumar Bagchi

During the last five decades physical chemistry, as a subject, has undergone revolutionary change not only in topics that comes under its purview but also in fundamental concepts, perspectives, and in particular understanding. A modern text book of physical chemistry should certainly contain a chapter on water, a chapter on protein folding and protein association, modern spectroscopy, modern electrochemistry (like new insights into the classical laws of electrochemistry), surface phenomena, nucleation and phase transition, statistical mechanics. The motivation for writing this new book came largely from the lack of coverage several important topics in the existing books.

R For College Mathematics and Statistics

Thomas Pfaff

This book encourages the use of R in the college mathematics classroom. Instructors no longer have to be limited to "nice" functions in calculus classes. They can require reports and homework with graphs. They can do simulations and experiments. R can be useful for student projects, for creating graphics for teaching, as well as for scholarly work. This book presents ways R can enhance teaching mathematics.

R has the potential to help students learn mathematics due to the need for precision, understanding of symbols and functions, and the logical nature of code.

The Shape of Space

Jeffrey R. Weeks and Jeffrey R. Weeks

Series: *Textbooks in Mathematics*

The Shape of Space, Third Edition maintains the standard of excellence set by the previous editions. This lighthearted textbook covers the basic geometry and topology of two- and three-dimensional spaces—stretching students' minds as they learn to visualize new possibilities for the shape of our universe.

Its informal exposition and engaging exercises appeal to an exceptionally broad audience, from liberal arts students to math undergraduate and graduate students looking for a clear intuitive understanding to supplement more formal texts, and even laypeople seeking an entertaining self-study book.

Spherical Geometry and Its Applications

Marshall A. Whittlesey

Series: *Textbooks in Mathematics*

Spherical Geometry and Its Applications introduces spherical geometry and its practical applications in a mathematically rigorous form. The text can serve as a course in spherical geometry for mathematics majors. Readers from various academic backgrounds can comprehend various approaches to the subject.

The book introduces an axiomatic system for spherical geometry and uses it to prove the main theorems of the subject. It also provides an alternate approach using quaternions. The author illustrates how a traditional axiomatic system for plane geometry can be modified to produce a different geometric world.

Understanding Real Analysis

Paul Zorn, St. Olaf College, Northfield, Minnesota, USA

Understanding Real Analysis, Second Edition offers substantial coverage of foundational material and expands on the ideas of elementary calculus to develop a better understanding of crucial mathematical ideas. The text meets students at their current level and helps them develop a foundation in real analysis. The author brings definitions, proofs, examples and other mathematical tools together to show how they work to create unified theory. These helps students grasp the linguistic conventions of mathematics early in the text. The text allows the instructor to pace the course for students of different

mathematical backgrounds.

Variational Techniques for Elliptic Partial Differential Equations

Theoretical Tools and Advanced Applications

Francisco J. Sayas, Thomas S. Brown and Matthew E. Hassell

Variational Techniques for Elliptic Partial Differential Equations, intended for graduate students studying applied math, analysis, and/or numerical analysis, provides the necessary tools to understand the structure and solvability of elliptic partial differential equations. Beginning with the necessary definitions and theorems from distribution theory, the book gradually builds the functional analytic framework for studying elliptic PDE using variational formulations. Rather than introducing all of the prerequisites in the first chapters, it is the introduction of new problems which motivates the development of the associated analytical tools.

Advanced Engineering Mathematics with Mathematica

Edward B. Magrab

Advanced Engineering Mathematics with Mathematica presents advanced analytical solution methods that are used to solve boundary value problems in engineering and integrates these methods with over 200 Mathematica programs. It emphasizes the Sturm-Liouville system and the generation and application of orthogonal functions, which are used by the separation of variables method to solve partial differential equations.

Automotive Innovation

The Science and Engineering behind Cutting-Edge Automotive Technology

Patrick Hossay, Stockton University, NJ, USA

Automotive Innovation: The Science and Engineering behind Cutting-Edge Automotive Technology provides a survey of innovative automotive technologies in the industry. Automobiles are rapidly changing, and this text explores these trends. IC engines, transmissions, and chassis are being improved, and there are breakthroughs in digital control, manufacturing, and materials. New vehicles demonstrate improved performance, safety and efficiency factors; and electric vehicles represent a new alternative; sensing technologies and computer processors redefine the nature of driving. The text explores these changes, the engineering and science behind them, and directions for

the future.

Advanced Heat Transfer

Greg F. Naterer

Advanced Heat Transfer, Second Edition provides a comprehensive presentation of intermediate and advanced heat transfer, and a unified treatment including both single and multiphase systems. It provides a fresh perspective, with coverage of new emerging fields within heat transfer, such as solar energy and cooling of microelectronics. Conductive, radiative and convective modes of heat transfer are presented, as are phase change modes. Using the latest solutions methods, the text is ideal for the range of engineering majors taking a second-level heat transfer course/module, which enables them to succeed in later coursework in energy systems, combustion, and chemical reaction engineering.

Basics of Hydraulic Systems, Second Edition

Qin Zhang, Washington State University, Prosser, USA

Basics of Hydraulic Systems, Second Edition provides students and professionals in both engineering and technology management fields a basic book to assist in their study of fluid power systems technology. This edition is expanded to include new chapters on system modeling and hydraulic systems controls. The text covers subjects essential to understanding operating principles, configuration features, functionalities, applications of composing elements, and controls of hydraulic systems. It presents them in a systematic, accessible way, following the course of energy transmission in hydraulic power generation, distribution, deployment, modeling, and control in

fluid power systems.

Basics of Precision Engineering

Edited by **Richard Leach**, University of Nottingham, United Kingdom and **Stuart T. Smith**, University of North Carolina, Charlotte, North Carolina, USA

BASICS OF PRECISION MACHINERY provides students and professionals a comprehensive and up-to-date survey of the field. The text reviews basic dynamics of machinery and kinematics concepts, and the design of mechanisms. Engineering materials selection and behavior is examined, along with environmental isolation. Metrology principles and applications, and dimensional metrology, are presented in detail, since these topics are essential to precision engineering; uncertainty analysis and probability are covered as well. Numerous figures, tables, examples and problems are included throughout the text, and a Solutions Manual and Figure Slides are available for professors who adopt the textbook.

Energy, the Environment, and Sustainability

Efstathios E. Michaelides

Series: *Mechanical and Aerospace Engineering Series*

Energy and the Environment explains in simple terms what the energy demand is at the present, what the environmental effects of energy use are, and what can be accomplished to alleviate the environmental effects of energy use and ensure adequate energy supply. Though technical in approach, the text uses simple explanations of engineering processes and systems and algebra-based math to be comprehensible to students in a range of disciplines. Schematic diagrams, quantitative examples, and numerous problems will help students make quantitative calculations. This will assist them in comprehending the

complexity of the energy-environment balance, and to analyze and evaluate proposed solutions.

Finite Element Modeling and Simulation with ANSYS Workbench, Second Edition

Xiaolin Chen, Washington State University, Vancouver, USA and Yijun Liu, University of Cincinnati, Ohio, USA

Finite Element Modeling and Simulation with ANSYS Workbench 18, Second Edition, combines finite element theory with real-world practice. Providing an introduction to finite element modeling and analysis for those with no prior experience, and written by authors with a combined experience of 30 years teaching the subject, this text presents FEM formulations integrated with relevant hands-on instructions for using ANSYS Workbench 18. Incorporating the basic theories of FEA, simulation case studies, and the use of ANSYS Workbench in the modeling of engineering problems, the book also establishes the finite element method as a powerful numerical tool in

engineering design and analysis.

Heat Conduction, Fifth Edition

Sadık Kakac, Yaman Yener and Carolina P. Naveira-Cotta, Universidade Federal do Rio de Janeiro, Brazil

Heat Conduction, Fifth Edition, upholds its reputation as the leading text in the field for graduate students, and as a resource for practicing engineers. The text begins with fundamental concepts, introducing the governing equation of heat conduction, and progresses through solutions for one-dimensional conduction, orthogonal functions, Fourier series and transforms, and multidimensional problems. Integral equations, Laplace transforms, finite difference numerical methods, and variational formulations are then covered. Nanoscale conductive heat transfer coverage has been added in this new edition, along with new and revised problems, and

complete problem solutions for instructors.

Introduction to Mechanism Design

with Computer Applications

Eric Constans and Karl B. Dyer

Introduction to Mechanism Design: with Computer Applications provides an updated approach to undergraduate Mechanism Design and Kinematics courses/modules for engineering students. The use of web-based simulations, solid modeling, and software such as MATLAB and Excel is employed to link the design process with the latest software tools for the design and analysis of mechanisms and machines. While a mechanical engineer might brainstorm with a pencil and sketch pad, the final result is developed and communicated through CAD and computational visualizations. This modern approach to mechanical design processes has not been fully integrated in

most books, as it is in this new text.

Kinematics and Dynamics of Mechanical Systems, Second Edition

Implementation in MATLAB® and SimMechanics®

Kevin Russell, New Jersey Institute of Technology, Newark, USA, Qiong Shen, Softalink LLC, Kearny, New Jersey, USA and Rajpal S. Sodhi, New Jersey Institute of Technology, Newark, USA

Kinematics and Dynamics of Mechanical Systems: Implementation in MATLAB® and SimMechanics®, Second Edition combines the fundamentals of mechanism kinematics, synthesis, statics and dynamics with real-world applications, and offers step-by-step instruction on the kinematic, static, and dynamic analyses and synthesis of equation systems. Written for students with no knowledge of MATLAB and SimMechanics, the text provides understanding of static and dynamic mechanism analysis, and

moves beyond conventional kinematic concepts—factoring in adaptive programming, 2D and 3D visualization, and simulation, and equips readers with the ability to analyze and design mechanical systems.

Liquid-Vapor Phase-Change Phenomena

An Introduction to the Thermophysics of Vaporization and Condensation Processes in Heat Transfer Equipment, Third Edition

Van P. Carey, University of California, Berkeley, USA

Since the second edition of Liquid Vapor Phase Change Phenomena was written, research has substantially enhanced the understanding of the effects of nanostructured surfaces, effects of microchannel and nanonchannel geometries and the effects of extreme wetting on liquid-vapor phase change processes. This edition includes significant new coverage of microchannels and nanostructures along with many other updates. More worked examples and numerous new problems have been added along with a complete solutions manual and electronic figures for classroom projection.

Modeling and Analysis of Dynamic Systems

Ramin S. Esfandiari, California State University, Long Beach, USA, Bei Lu, California State University, Long Beach, USA and Bei Lu

Modeling and Analysis of Dynamic Systems, Third Edition introduces MATLAB®, Simulink®, and Simscape™ and then utilizes them to perform symbolic, graphical, numerical, and simulation tasks. Written for senior level courses/modules, the textbook meticulously covers techniques for modeling a variety of engineering systems, methods of response analysis, and introductions to mechanical vibration, and to basic control systems. These features combine to provide students with a thorough knowledge of the mathematical modeling and analysis of dynamic systems. The Third Edition now includes Case Studies,

expanded coverage of system identification, and updates to the computational tools included.

Logan's Turbomachinery

Flowpath Design and Performance Fundamentals, Third Edition

Bijay Sultanian, University of Central Florida, Orlando, FL

Series: Mechanical Engineering

Logan's Turbomachinery: Flowpath Design and Performance Fundamentals, Third Edition is the long-awaited revision of this classic textbook, thoroughly updated by Dr. Bijay Sultanian. While the basic concepts remain constant, turbomachinery design has advanced since the Second Edition was published in 1993. Airfoils in modern turbomachines feature three-dimensional geometries, Computational Fluid Mechanics (CFD) has become a standard design tool, and major advances have been made in the materials and manufacturing technologies that affect turbomachinery design. The new edition addresses these trends to best serve today's students, and design engineers working

in turbomachinery industries.

Numerical Methods and Methods of Approximation in Science and Engineering

Karan S. Surana, University of Kansas, Lawrence USA

Numerical Methods and Methods of Approximation in Science and Engineering prepares students and other readers for advanced studies involving applied numerical and computational analysis. Focused on building a sound theoretical foundation, it uses a clear and simple approach backed by numerous worked examples to facilitate understanding of numerical methods and their application. Readers will learn to structure a sequence of operations into a program, using the programming language of their choice; this approach leads to a deeper understanding of the methods and their limitations. The text features highlighted examples, numerous problems, and a complete Solutions Manual for instructors.

Mechanics of Mechanisms and Machines

Ilie Talpasanu, Wentworth Institute of Technology, Boston, Massachusetts, USA and Alexandru Talpasanu

Mechanics of Mechanisms and Machines provides a practical approach to machine dynamics and kinematics for undergraduate students and mechanical engineers. It starts by analyzing simple mechanisms, and progresses to more complex examples. It will be the only textbook to cover mechanism design through the use of graphs and generation of independent equations from a matroid form.

Planar Multibody Dynamics

Formulation, Programming with MATLAB®, and Applications, Second Edition

Parviz E. Nikravesh

Planar Multibody Dynamics: Formulation, Programming, and Applications, Second Edition enhances the quality and ease of design education with extensive use of the latest computerized design tools combined with coverage of classical design and dynamics of machinery principles. Using clear, concise language, the text introduces fundamental theories, computational methods, and program development for analyzing simple to complex mechanical systems. MATLAB® is used throughout, with examples begin with basic commands before introducing students to more advanced programming techniques. The routines developed in each chapter come together to form complete programs for different types of analysis.

Principles of Sustainable Energy Systems, Third Edition

Charles F. Kutscher, National Renewable Energy Laboratory, Golden, Colorado, USA, **Jana B. Milford**, University of Colorado Boulder, USA and **Frank Kreith**, University of Colorado, Boulder, USA (retired)

Series: Mechanical and Aerospace Engineering Series

Principles of Sustainable Energy Systems, 3rd Edition surveys the range of sustainable energy sources and the tools that engineers, scientists, and policy makers use to analyze energy generation, usage, and future trends. The text provides complete and up-to-date coverage of all renewable technologies, including solar and wind power, biofuels, hydroelectric, nuclear, ocean power, and geothermal energy. The economics of energy are

introduced, with the SAM software package integrated so students can explore the dynamics of energy usage and prediction. Climate and environmental factors in energy use are integrated to give a complete picture of sustainable energy analysis and planning.

Processes and Design for Manufacturing, Third Edition

Sherif D. El Wakil, University of Massachusetts Dartmouth
Processes and Design for Manufacturing, Third Edition examines manufacturing processes from the viewpoint of the product designer, examining the selection of manufacturing methods in the early phases of design, and how this affects the constructional features of a product. Stages from design process to product development are examined, integrating evaluation of cost factors. The text emphasizes both a general design orientation and a systems approach, and covers topics such as additive manufacturing, concurrent engineering, polymeric and composite materials, cost estimation, design for assembly, and environmental factors. Appendices with materials engineering data are also included.

Radiation Detection

Concepts, Methods, and Devices

Douglas McGregor, Kansas State University, Manhattan, USA and **J. Kenneth Shultis**

Radiation Detection: Concepts, Methods, and Devices provides a modern overview of radiation detection devices and radiation measurement methods. The book topics have been selected on the basis of the authors' many years of experience designing radiation detectors and teaching radiation detection and measurement in a classroom environment. This book is designed to give the reader more than a glimpse at radiation detection devices and a few packaged equations. Rather it seeks to provide an understanding that allows the reader to choose the appropriate detection technology for a particular application, to design detectors, and to competently perform radiation measurements.

Wind Energy Design

Thomas Corke and **Robert Nelson**

Wind Energy Systems is designed for undergraduate engineering courses, with a focus on multidisciplinary design of a wind energy system. The text covers basic wind power concepts and components - wind characteristics and modeling, rotor aerodynamics, lightweight flexible structures, wind farms, aerodynamics, wind turbine control, acoustics, energy storage, and economics. These topics are applied to produce a new conceptual wind energy design, showing the interplay of various design aspects in a complete system. An ongoing case study demonstrates the integration of various component topics, and MATLAB examples are included to show computerized design analysis procedures and techniques.

A Mathematica Primer for Physicists

Jim Napolitano, Temple University, Pennsylvania, USA

Series: Textbook Series in Physical Sciences

This book offers the most concise and approachable guide for quickly getting into Mathematica and using it for solving common problems. The author addresses a wide range of problems, including numerical calculations, animation, and visualization tools. Each chapter begins with simple commands, and then shows how to apply them. The goal is to give the essentials necessary for readers to get started, without getting bogged down in unnecessary details. The writing is clear and conversational, making it accessible and easy for the reader to follow.

College Physics Essentials, Eighth Edition

Mechanics, Thermodynamics, Waves (Volume One)

Jerry D. Wilson, Lander University, SC, USA, Anthony J. Buffa, California Polytechnic State University, CA, USA and Bo Lou, Ferris State University, MI, USA

This edition provides a streamlined update of a major textbook for algebra-based physics, reflecting the demand by instructors for more substance. The authors enhance emphasis on worked examples to enhance reader engagement, together with expanded problem sets that build from conceptual understanding to numerical solutions and real-world applications. It is the textbook of choice for those seeking a basic understanding of key physics concepts and how to apply them

to real problems. The first volume covers mechanics, solids and fluids, heat, thermodynamics, vibrations and waves, and sound. The second volume covers electricity and magnetism, optics, atomic, nuclear, and quantum physics.

Concise Optics

Concepts, Examples, and Problems

Ajawad I. Haija, Indiana University of Pennsylvania, USA, M. Z. Numan, Indiana University of Pennsylvania, USA and W. Larry Freeman, Indiana University of Pennsylvania, Professor Emeritus, USA

Series: Textbook Series in Physical Sciences

This introductory text is a reader friendly treatment of geometrical and physical optics emphasizing problems and solved examples with detailed analysis and helpful commentary. The authors are seasoned educators with decades of experience teaching optics. Their approach is to gradually present mathematics explaining the physical concepts. It covers ray tracing to the wave nature of light, and introduces Maxwell's equations in an organic fashion. The text then moves on to explain how to analyze simple optical systems such as spectacles for improving vision, microscopes, and telescopes, while also being exposed to contemporary research topics.

Experimental Physics

Principles and Practice for the Laboratory

Edited by Walter Fox Smith

This textbook provides the underlying knowledge and skills needed to understand and utilize the most common and important experimental and data analysis techniques in physics. The reader is presented with the tools to design, assemble, and debug experimental apparatus, and to use it to take meaningful data. The contents start with an introduction to key topics such as troubleshooting, statistical methods, and the scientific method, then progressing through a sequence of experiments that encompass each major subfield of physics. Experiments lay out background theory, procedures and equipment, conceptual questions, safety instructions, examples, and troubleshooting

exercises.

Mathematical Methods for Physics and Engineering

Mattias Blennow, KTH Royal Institute of Technology, Stockholm, Sweden

Suitable for advanced undergraduate and graduate students, this new textbook contains an introduction to the mathematical concepts used in physics and engineering. The entire book is unique in that it draws upon applications from physics, rather than mathematical examples, to ensure students are fully equipped with the tools they need. This approach prepares the reader for advanced topics, such as quantum mechanics and general relativity, while offering examples, problems, and insights into classical physics. The book is also distinctive in the coverage it devotes to modelling, and to oft-neglected topics such as

Green's functions.

Daniel H. Nichols, Matanuska-Susitna College, University of Alaska Anchorage, USA

Series: *Textbook Series in Physical Sciences*

This text provides an introduction to the important physics underpinning current technologies, highlighting key concepts in areas that include linear and rotational motion, energy, work, power, heat, temperature, fluids, waves, and magnetism. This revision reflects the latest technology advances, from smart phones to the Internet of Things, and all kinds of sensors. The author also provides more modern worked examples with useful appendices and laboratories for hands-on practice. There are also two brand new chapters covering sensors as well as electric fields and electromagnetic radiation as applied to current technologies.

Physics of Semiconductors and Nanostructures

Jyoti Prasad Banerjee, Institute of Radio Physics and Electronics, University of Calcutta, Kolkata, West Bengal and **Suranjana Banerjee**, West Bengal University of Technology, Hooghly, India

This book covers the physics of semiconductor materials, basic concepts of quantum mechanics and nanoelectronics, band theory of solids, and transport phenomena in semiconductors, along with the physics of low-dimensional quantum nanostructures, heterojunctions, and superlattices. It supplies a solid foundation for understanding the principles of operation and application of different types of microelectronic, optoelectronic, and quantum-effect devices based on

semiconductor materials and nanostructures. Complete with exercises, the text is intended for junior- and senior-level undergraduate students of electrical and electronics engineering, physics, and materials science.

Primer on Radiation Oncology Physics

Video Tutorials with Textbook and Problems

Eric Ford, University of Washington Department of Radiation Oncology Box 356043 1959 NE Pacific Street Seattle, WA 98195

Gain mastery over the fundamentals of radiation oncology physics! This package gives you over 60 tutorial videos (each 15-20 minutes in length) with a companion text, providing the most complete and effective introduction available. Dr. Ford has tested this approach in formal instruction for years with outstanding results. The text includes extensive problem sets for each chapter with detailed solutions provided for instructors. The videos include embedded quizzes and 'whiteboard' screen technology to facilitate comprehension. Together, this provides a valuable learning tool both for training purposes and as a refresher for those in practice.

Quantitative Understanding of Biosystems

An Introduction to Biophysics, Second Edition

Thomas M. Nordlund, University of Alabama at Birmingham and **Peter M. Hoffmann**, Wayne State University

Series: *Foundations of Biochemistry and Biophysics*

This new edition provides a complete update to the most accessible yet thorough introduction to the physical and quantitative aspects of biological systems and processes involving macromolecules, subcellular structures, and whole cells. It includes two brand new chapters covering experimental techniques, especially atomic force microscopy, complementing the updated coverage of mathematical and computational tools. The authors have also incorporated additions to the multimedia

component of video clips and animations, as well as interactive diagrams and graphs.

Quantum Mechanics

An Introduction

Thomas Banks, Rutgers University, Piscataway, New Jersey, USA

This new introductory textbook gives a complete, modern perspective on quantum mechanics as the basis of so much of physical sciences and today's electronic technologies. It clarifies for the first time many common misconceptions regarding wave/particle duality and the correct interpretation of measurements. The author, a recognized authority in the field and dedicated educator, presents information at an elementary level, avoiding the detailed, complex derivations in favor of

simple, clear explanations.

Quantum Principles and Particles, Second Edition

Walter Wilcox, Baylor University, Waco, Texas, USA

Series: *Textbook Series in Physical Sciences*

This textbook offers a unique introduction to quantum mechanics progressing gradually from elementary quantum mechanics to aspects of particle physics. It presents the microscopic world by analysis of the simplest possible quantum mechanical system (spin 1/2). A special feature is the author's use of visual aids known as process diagrams, which show how amplitudes for quantum mechanical processes are computed. The second edition includes a new chapter on time-dependent processes, in addition to many new problems and improved illustrations.

Sturge's Statistical and Thermal Physics, Second Edition

Jeffrey Olafsen

This fully revised and updated edition provides a uniquely accessible introduction to the principles and applications of statistical mechanics and thermodynamics. Based on the highly acclaimed text by famous physicist M.D. Sturge, it continues its emphasis on explaining concepts with simple mathematics and plain English, as well as consistent use of terminology and notation. The new edition includes a chapter on non-equilibrium thermodynamics and many new examples from soft condensed matter physics. Additionally, chapters have been reorganized for better flow.

Understanding Nanomaterials

Malkiat S. Johal, Pomona College, CA, USA and Lewis E. Johnson, North Carolina State University, USA.

Series: *Textbook Series in Physical Sciences*

The authors provide the perfect training tool for the workforce in nanotech development by presenting the fundamental principles that govern the fabrication, characterization, and application of nanomaterials. This edition represents a complete overhaul, giving a much more complete, self-contained introduction. As before, the text avoids excessive mathematical detail and is written in an easy to follow, appealing style suitable for anyone, regardless of background in physics, chemistry, engineering, or biology. The organization has been revised to include fundamental physical chemistry and physics pertaining

to relevant electrical, mechanical, and optical material properties.

Thermodynamics

James Luscombe

This book provides an accessible yet thorough introduction to thermodynamics, crafted and class-tested over many years of teaching. Suitable for advanced undergraduate and graduate students, this book delivers clear descriptions of how to think about the mathematics and physics involved. The content has been carefully developed in consultation with a large number of instructors teaching courses worldwide, to ensure wide applicability to modules on thermodynamics. Modern applications of thermodynamics (in physics and related areas) are included throughout—something not offered to the same degree by existing texts in the field.

Time-Resolved Spectroscopy

An Experimental Perspective

Thomas Weinacht, Stony Brook University, New York, USA and Brett J. Pearson, Dickinson College, Carlisle, Pennsylvania, USA

Series: *Textbook Series in Physical Sciences*

This concise and carefully developed text offers a reader friendly guide to the basics of time-resolved spectroscopy with an emphasis on experimental implementation. The authors carefully explain and relate for the reader how measurements are connected to the core physical principles. They use the time-dependent wave packet as a building block for understanding quantum dynamics, progressively advancing to more complex topics. The topics are discussed in paired sections, one discussing the theory and the next presenting the related

experimental methods.

A wide range of readers including students and newcomers to the field will gain a clear and practical understanding of how to measure aspects of molecular dynamics such as wave packet motion, intramolecular vibrational relaxation, and electron-electron coupling, and how to describe such measurements mathematically.

4th Edition · TEXTBOOK

An Introduction to Generalized Linear Models

Annette J. Dobson, University of Queensland, Herston, Australia and Adrian G. Barnett, Queensland University of Technology, Kelvin Grove, Australia

Series: *Chapman & Hall/CRC Texts in Statistical Science*

This book provides a cohesive framework for statistical modelling, with an emphasis on numerical and graphical methods. This new edition of a bestseller has been updated with new sections on non-linear associations, strategies for model selection, and a Postface on good statistical practice.

Like its predecessor, it presents the theoretical background of generalized linear models (GLMs) before focusing on methods for analyzing particular kinds of data. It covers Normal, Poisson, and Binomial distributions; linear regression models; classical estimation and model fitting methods; and frequentist methods of statistical inference. After forming this foundation, the authors explore multiple linear regression, analysis of variance (ANOVA), logistic regression, log-linear models, survival analysis, multilevel modeling, Bayesian models, and Markov chain Monte Carlo (MCMC) methods.

Algorithmic Trading and Quantitative Strategies

Raja Velu, Maxence Hardy and Daniel Nehren

This book brings together the literature in main stream finance and the tools presented in quantitative finance with a focus on what is being practiced in industry. The author begins with the economic theory behind price formation and tests the model that results from the theory and suggests algorithms to detect and exploit the anomalies. The book provides a comprehensive description of the methodologies both published and unpublished, but being practiced. The strength of the book is the intuitive approach to developing algorithms – based on statistical techniques, machine learning ideas, and optimization methods.

Introduction to Data Science

Data Analysis and Prediction Algorithms with R

Rafael A. Irizarry

Series: *Chapman & Hall/CRC Data Science Series*

The book begins by going over the basics of R and the tidyverse. You learn R throughout the book, but in the first part we go over the building blocks needed to keep learning during the rest of the book.

Introduction to Probability, Second Edition

Joseph K. Blitzstein, Harvard University, Cambridge, Massachusetts, USA and Jessica Hwang, Stanford University, California, USA

Series: *Chapman & Hall/CRC Texts in Statistical Science*

Undergraduate probability book that assumes one-semester of calculus. One key is the emphasis on "stories" for the probability distributions (which I mean in both an intuitive and technical sense): there are a dozen or so key distributions (Normal, Binomial, Poisson, etc.) that are incredibly widely-used in statistics, but a lot of books just write down formulas for them without explaining clearly why these particular distributions are so important, or how they are all connected. Each of these distributions has a "story" (a natural application where it arises), and thinking about stories makes the distributions easier to remember, understand, and work with.

Linear Models and the Relevant Distributions and Matrix Algebra

David A. Harville, Iowa State (Emeritus)

Series: *Chapman & Hall/CRC Texts in Statistical Science*

The book describes the use of linear statistical models as a basis for statistical inference and the theoretical underpinnings of the resultant inferential procedures. It covers the relevant distributions and matrix algebra that is relatively complete and self-contained. Derivations or proofs are provided for almost all results; some of these are not readily available from other sources. The book includes coverage of some topics that are typically covered less extensively or not covered at all in other books on linear models; among these topics are prediction, multiple-comparison procedures for controlling the FDR, and spherical/elliptical distributions.

Multivariate Analysis for the Behavioral Sciences, Second Edition

Kimmo Vehkalahti and Brian S. Everitt, King's College, University of London, England, UK

Series: *Chapman & Hall/CRC Statistics in the Social and Behavioral Sciences*

Multivariate Analysis for the Behavioral Sciences, Second Edition is designed to show how a variety of statistical methods can be used to analyse data collected by psychologists and other behavioral scientists. Assuming some familiarity with introductory statistics, the book begins by briefly describing a variety of study designs used in the behavioral sciences, and the concept of models for data analysis. The contentious issues of p-values and confidence intervals are also discussed in the introductory chapter.

Practical Multivariate Analysis

Abdelmonem Afifi, University of California, Los Angeles, USA, Susanne May, University of Washington, Seattle, USA, Robin Donatello, UCLA and Virginia A. Clark, Consultant, Sequim, Washington, USA

Series: *Chapman & Hall/CRC Texts in Statistical Science*

This is the sixth edition of a popular textbook on multivariate analysis. Well-regarded for its practical and accessible approach, the book is particularly popular for teaching outside statisticians, i.e. in epidemiology, social science, business, etc. The sixth edition has been updated with a new chapter on data visualization, and many new updates and references throughout. This new edition will enable the book to continue as one of the leading textbooks in the area, particularly for non-statisticians.

Practical Spreadsheet Modeling Using @Risk

Dale Lehman, Loras College, Dubuque, IA and Huybert Groenendaal, EpiX Analytics, Boulder, Colorado, USA

This book is written for anyone interested in conducting applied risk analysis in business, engineering, environmental planning, public policy, medicine, or virtually any field amenable to spreadsheet modeling. The authors provide practical case studies along with detailed instruction and illustration of the features of @Risk, the most advanced risk modeling spreadsheet software currently available. If you intend to use spreadsheets for decision-supporting analysis, rather than merely as placeholders for numbers, then this is the resource for you.

Probability and Statistics for Data Science

Math + R + Data

Norman Matloff, Dept. of Computer Science, Univ. of California, Davis

Series: *Chapman & Hall/CRC Data Science Series*

This text is designed for a one-semester junior/senior/graduate-level calculus-based course on probability and statistics, aimed specifically at data science students (including computer science). In addition to calculus, the text assumes basic knowledge of matrix algebra and rudimentary computer programming. The key difference is the consistently applied approach, pervasive throughout the book. The overriding goal is to stay mathematically precise, yet emphasize intuition, modeling and applications.

Probability and Bayesian Modeling

Jim Albert and Jingchen Hu

Series: *Chapman & Hall/CRC Texts in Statistical Science*

Bayesian statistics has been advancing in all aspects (theoretically, methodologically and computationally) in recent years. Based on an intuitive interpretation and understanding of probability, Bayesian learning provides a natural framework for students to think and solve scientific problems. This book provides an introduction to Bayesian analysis for undergraduate students with calculus, statistics and computational background.

Statistical Analysis of Financial Data

With Examples In R

James E. Gentle, George Mason University

Series: *Chapman & Hall/CRC Texts in Statistical Science*

The book is about financial data, in particular, security prices and prices of derivatives, and the statistical methods for analyzing such data. It covers statistical models of branching processes, linear discrete time series models, and continuous-time stochastic models, all at an intermediate level (advanced undergraduate, or beginning graduate). The book provides a brief introduction to R and uses R extensively to get and analyze data. Actual financial datasets are discussed and analyzed.

Statistical Inference via Data Science: A Modern Dive into R and the Tidyverse

Chester Ismay, DataCamp and Albert Y. Kim
Series: *Chapman & Hall/CRC The R Series*

This is a modern textbook in statistical inference, using the principles of data science through R and the Tidyverse. It assumes minimal background knowledge of the reader: there is no algebra, no calculus, and no prior programming/coding experience. It is designed to be a gentle introduction to the practice of analyzing data and answering questions using data the way data scientists, statisticians, data journalists, and other researchers would. This book is suitable for teaching a first course in statistical inference at undergraduate level.

Statistical Rethinking

A Bayesian Course with Examples in R and STAN

Richard McElreath, Max Planck Institute for Evolutionary Anthropology, Leipzig, Germany
Series: *Chapman & Hall/CRC Texts in Statistical Science*

The very popular *Statistical Rethinking: A Bayesian Course with Examples in R and Stan, Second Edition* builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work.

Statistical Machine Learning

A Unified Framework

Richard Golden
Series: *Chapman & Hall/CRC Texts in Statistical Science*

For advanced undergraduate students, graduate students, and professional. Presents a wide range of popular, disparate, and diverse machine learning algorithms within a unified theoretical framework, characterized by a collection of carefully chosen theorems from the fields of nonlinear optimization theory and mathematical statistics which respectively characterize both asymptotic behavior and generalization performance. The purpose is to teach students how to confidently apply these theorems in practice. The only required mathematical prerequisites are lower-division linear algebra, lower-division calculus, and an upper-division calculus-based course in

probability theory.

Theory of Spatial Statistics

A Concise Introduction

M.N.M. van Lieshout, National Research Institute for Mathematics & Computer Science

Series: Chapman & Hall/CRC Texts in Statistical Science

Spatial data are collected in various ways, for example, weather maps, soil samples, incident patterns, microscopical slices, satellite, radar, or X-ray images. The statistical analysis of spatial data is treated as a separate topic, as it is different from classical statistical data in a number of ways. This book presents a concise introduction to the theory underlying the analysis of the main types of spatial data. It includes examples to illustrate the topics, including R code for their implementation, as well as exercises to support course teaching and self-study.

Theory of Stochastic Objects

Probability, Stochastic Processes and Inference

Athanasios Christou Micheas, University of Missouri, Columbia, USA

Series: Chapman & Hall/CRC Texts in Statistical Science

This book defines and investigates the concept of a random object. To accomplish this task in a natural way, it brings together three major areas; statistical inference, measure-theoretic probability theory and stochastic processes. This point of view has not been explored by existing textbooks. One would need to use one book on Real Analysis, one on Measure and/or Probability theory, one in Stochastic processes, and at least one on Statistics to capture the detail and depth of material that has gone into this text.

Robert Shumway and **David Stoffer**, University of Pittsburgh, Pennsylvania, USA

Series: Chapman & Hall/CRC Texts in Statistical Science

This textbook is designed for an introductory time series course where the prerequisites are an understanding of linear regression and some basic probability skills. All of the numerical examples were done using the R statistical package, and the code is typically listed at the end of an example.

TEXTBOOK · READER

Time Series

A First Course with Bootstrap Starter

Tucker S. McElroy, U.S. Census Bureau, Washington, D.C., USA and **Dimitris N. Politis**, University of California, California, USA

Series: Chapman & Hall/CRC Texts in Statistical Science

The book provides the foundation of time series methods, including linear filters and a geometric approach to prediction. The important paradigm of ARMA models is studied in-depth, as well as frequency domain methods. Entropy and other information theoretic notions are introduced, with applications to time series modeling. The second half of the book focuses on statistical inference, the fitting of time series models, as well as computational facets of forecasting. Many time series of interest are nonlinear in which case classical inference methods

can fail, but bootstrap methods may come to the rescue

Chapman and Hall/CRC
